Plan Summary

Executive Summary

As of 03/31/2017

VERMONT MUNICIPAL – 57626

Plan / Participant Statistics

Plan participants / assets

• Assets \$M	\$21.71
• Avg Age ¹	51
• Median Balance ² (\$K)	\$19.4
• Median Balance ² Parts 55 and older (\$K)	\$65.1

Return / Risk (Annualized)

• 3 Yr Participant Return ^{2,3} /	6.2% /
• 3 Yr S&P 500 Return	10.37%
• 3 Yr Participant Risk ^{2,3} /	9.1% /
• 3 Yr S&P 500 Risk	10.41%

Investment Performance

Performance for Review

• % of Assets / Number of Products Underperforming Primary Benchmark & Mstar Cat (3 & 5 Yr)	11.8% / 5
---	-----------

Asset Allocation & Investment Design

Asset Allocation

• Participants Inside Age-Based Equity Band*	71%
• 100% Equity Exposure	6.3%
• 0% Equity Exposure	1.4%

Investment Design

• Investment options utilized ^{1*}	19
• Lifecycle Default ¹	Yes
• Managed accounts	No
• SDB utilized ¹	No
• Roth offered	No
• Number of Index options utilized ¹	4

Please see Fund Diagnostics Summary pages for performance and expense information.

* The Age-Based equity band represents an interval of plus or minus ten percentage points around the Fidelity target date strategy equity glide path, not to exceed 95% equity. Participants whose actual equity allocations fall within this age-based interval are said to be "inside" the equity band. The Fidelity equity band is not intended as a benchmark for individual investors; rather, it represents a range of equity allocations that may be appropriate for many investors saving for retirement.

³Past performance is no guarantee of future results. Please see Important Additional Information page for details of Return / Risk calculation

Indices are for comparison purposes only and do not represent plan benchmark. Indices are unmanaged and you cannot invest directly in an index.

Risk is represented by standard deviation.

Note: For underperformance data displayed above, products must underperform for both 3 & 5 year timeframes.

Asset Allocation & Investment Design and Plan / Participant Statistics (with the exception of Assets) is as of 03/31/2017

As of date for Assets and all other data points is noted above.

Important Additional Information

¹Plan weighted ²Participant weighted ⁴Asset weighted ♦ Lifecycle=1, Self Directed Brokerage=1

For SDB (Self Directed Brokerage) utilized, at least one participant must be participating. For Median number of Index options utilized, the data represents if utilized excl. Lifecycle.

Participant Returns are annualized. Participant Risk is annualized standard deviation of monthly returns.

Fund expense rating is a Morningstar data point and is calculated by comparing the fund's net expense ratio to the net expense ratio of all of the other funds within its Morningstar Category grouping.

Data in this report is based on Fidelity internal systems and analysis.

A **Self Directed Brokerage** account may entail greater risk and is not appropriate for everyone. Additional fees apply to a Self Directed Brokerage account.

Hybrid/ Balanced consists of mutual funds, commingled pools, and separate accounts composed of at least two asset classes - one being an equity option and the other either a fixed-income or money market option. Included in this category are lifecycle (target-date) options, lifestyle (target-risk) options, balanced options, and "strategies" (i.e., funds of funds, pools, and separate accounts) meeting the above conditions. Most of the assets and default fund usage within this asset class are Lifecycle (target-date) options.

Specialty consists of real estate, REITs, natural resources, precious metals, healthcare, energy, sector-specific funds (e.g., Fidelity's Select funds), as well as convertible securities.

Returns shown represent past performance, which does not guarantee future results. Investment return and principal value of an investment will fluctuate; therefore, you may have a gain or loss when you sell your shares. Current performance may be higher or lower than the performance stated.

Participant returns are annualized for the period indicated and are based on a time-weighted investment return formula that eliminates the effect of participants' cash flows during the entire return period. The formula is intended to reflect the performance of the managers of the underlying investments rather than the actual returns of investors who may have bought and sold the investments at different times over the return period. Returns that take into account the effect of participant cash flows during the return period (i.e., dollar weighted returns) could be significantly different from these time-weighted returns. The longer the return period, the larger the cash flows and the more volatile the investment, the greater the potential difference between the two types of returns. Plan returns were calculated based on aggregate plan assets, not individual participant returns. All returns are historical and include change in share value and reinvestment of dividends and capital gains, if any.

Peer Grouping categories consist of all Plans which met the client criteria at the specified point in time. The makeup of the peer group changes from period to period.

Markets Overview

2017 Q1 Market Summary (as of 3/31/2017)

Global summary: signs of synchronized reacceleration and reflation

- After a reacceleration supported by a global industrial recovery, the global economy continues to gain traction and show signs of a synchronized expansion.
- Export-oriented countries, such as South Korea, Taiwan, and Japan, have showed notable improvement, with inventory-to shipment ratios in these countries moving toward benign levels, as sales outpace inventory growth.
- Commodity exporting countries, such as Canada and Australia, also have improved due to recovering commodity prices, although they are farther along in their cycles.

United States: U.S. economy is in solid shape, but in the later stages of its business cycle

- The economy is experiencing a healthy expansion on the back of solid labor markets and consumer spending. The unemployment rate has recovered to pre-recession lows, and wage growth continues to pick up.
- The economy exhibits elements of a more mature phase (mid to late) of the U.S. business cycle, without the broad-based slack in labor and credit markets that typically drive sharp early-cycle accelerations in growth.
- Potential changes in U.S. economic policies continue to be a key focus for the financial markets. Some progress on regulatory relief has helped boost business optimism, but legislative plans for tax reform and other measures may take some time to pan out.

International Markets: underlying global tailwind supporting equities

- The Euro Area remains in a mature mid-cycle phase. There are risks stemming from the European political environment, but overall, Europe's cyclical expansion remains steady.
- As global trade reaccelerates along with Asian growth, both the German industrial and service sectors are the healthiest they have been during this cycle.
- The Chinese economy remains in cyclical expansion, but policymakers have begun to rein in monetary and credit stimulus. A less accommodative policy, in addition to continued excess credit and capacity, will serve to constrain China's cyclical growth upside.

Politics and policy: Trade policy risks loom over global landscape

- The global economy entered 2017 on solid footing, with investor optimism high for pro-growth regulatory and tax policy changes from the new government in Washington. However, the risks of greater protectionism have also risen.
- The new Trump administration's more confrontational approach to trade relationships raises protectionist risks for the global economy and financial markets.
- An outright trade war between the U.S. and China could be devastating, but more nuanced policy changes would have varying impacts across a variety of countries, sectors, and companies.

Investment Risks:

Stock markets are volatile and can decline significantly in response to adverse issuer, political, regulatory, market, or economic developments. Foreign investments, especially those in emerging markets, involve greater risk and may offer greater potential returns than U.S. investments. This risk includes political and economic uncertainties of foreign countries, as well as the risk of currency fluctuation.

In general the bond market is volatile, and fixed income securities carry interest rate risk. (As interest rates rise, bond prices usually fall, and vice versa. This effect is usually more pronounced for longer-term securities.) Fixed income securities also carry inflation risk and credit and default risks for both issuers and counterparties. Unlike individual bonds, most bond funds

do not have a maturity date, so avoiding losses caused by price volatility by holding them until maturity is not possible. Lower-quality debt securities involve greater risk of default or price changes due to potential changes in the credit quality of the issuer. Past performance is no guarantee of future results.

Non-U.S. Assets Led Widespread Q1 Gains

Bolstered by a weaker dollar, non-U.S. equities led the Q1 global stock market rally, with emerging-market equities pushing past U.S. large-cap performance on a one-year basis for the first time in years. Flattish bond yields amid signs of moderate-but-not-overheating economic expansion provided a solid backdrop for most asset categories.

I. Asset Class Performance

	Q1 2017 (%)	1-Year (%)		Q1 2017 (%)	1-Year (%)
Emerging-Market Stocks	11.5%	17.7%	High-Yield Bonds	2.7%	16.9%
Gold	8.6%	0.6%	Real Estate Stocks	2.5%	5.3%
Non-U.S. Small-Cap Stocks	8.1%	11.4%	U.S. Small-Cap Stocks	2.5%	26.2%
Non-U.S. Developed-Country Stocks	7.4%	12.2%	Long Government & Credit Bonds	1.6%	1.0%
U.S. Large-Cap Stocks	6.1%	17.2%	U.S. Corporate Bonds	1.3%	3.0%
U.S. Mid-Cap Stocks	5.1%	17.0%	Investment-Grade Bonds	0.8%	0.4%
Emerging-Market Bonds	3.9%	8.8%	Commodities	-2.5%	8.3%

II. Risk Meter: U.S. Large-Cap Stock minus Intermediate Treasury Bond Returns, 1987–2017

The risk meter is a simple way of summarizing whether investors were in “risk on” mode (preferring equities) or “risk off” mode (preferring safer Treasury bonds).

Past performance is no guarantee of future results. It is not possible to invest directly in an index. See appendix for important index information. Assets represented by: Commodities – Bloomberg Commodity Index; Emerging-Market Bonds – JP Morgan EMBI Global Index; Emerging-Market Stocks – MSCI EM Index; Gold – Gold Bullion, LBMA PM Fix; High Yield Bonds – Bank of America Merrill Lynch (BofA ML) High Yield Bond Index; Investment-Grade Bonds – Barclays U.S. Aggregate Bond Index; Non-U.S. Developed-Country Stocks – MSCI EAFE Index; Non-U.S. Small-Cap Stocks – MSCI EAFE Small Cap Index; Real Estate Stocks – FTSE NAREIT Equity Index; U.S. Corporate Bonds – Barclays U.S. Credit Index; U.S. Large-Cap Stocks – S&P 500 Index; U.S. Mid-Cap Stocks – Russell Midcap Index; U.S. Small-Cap Stocks – Russell 2000 Index; U.S. Treasury Bonds – Barclays U.S. Treasury Index. U.S. Economy is Between Mid- and Late Cycle

I. Business Cycle Update

Source: Fidelity Investments(Asset Allocation Research Team) as of 3/31/17.

- ▶ The global economy is experiencing a relatively steady, synchronized expansion. Broadly speaking, most developed economies are in more mature (mid to late) stages of the business cycle, with the eurozone less far along than the United States.
- ▶ China's improved cyclical trajectory has helped boost many emerging market economies and catalyzed a recovery in the global manufacturing, trade, and commodity industries.
- ▶ Some U.S. businesses are experiencing a growth revival, with the global economic recovery boosting areas such as manufacturing and supporting a recovery in profit growth.
- ▶ As is typical during a maturing cycle, the expectation for higher policy rates has tightened credit conditions in several business and consumer categories, including business loans, auto loans, and credit cards. Current credit and monetary conditions support continued expansion, but if growth and inflation accelerate, monetary and credit standard tightening are likely to act as a counterweight.

Note: Diagram I is a hypothetical illustration of the business cycle. There is not always a chronological, linear progression among the phases of the business cycle, and there have been cycles when the economy has skipped a phase or retraced an earlier one.

II. Policy Uncertainty and Equity Market Volatility

- ▶ Stock market volatility remained at extremely low levels, even as the high level of global political uncertainty persisted.
- ▶ Potential changes in U.S. economic policies continue to be a key focus for the financial markets. Some progress on regulatory relief has helped boost business optimism, but legislative plans for tax reform and other measures continue to lack clarity and may take some time to pan out.
- ▶ The uncertain outlook for U.S. economic legislation and upcoming elections in core European countries—including presidential elections in France during Q2—are likely to keep politics on the minds of many investors.

The Global Policy Uncertainty Index is a GDP-weighted average of national Economic Policy Uncertainty (EPU) indices for 18 countries: Australia, Brazil, Canada, Chile, China, France, Germany, India, Ireland, Italy, Japan, the Netherlands, Russia, South Korea, Spain, Sweden, the United Kingdom, and the United States. Each national EPU index reflects the relative frequency of own-country newspaper articles that contain a trio of terms pertaining to the economy (E), policy (P) and uncertainty (U). In other words, each monthly national EPU index value is proportional to the share of own-country newspaper articles that discuss economic policy uncertainty in that month. The CBOE Volatility Index® (VIX® Index®) is a key measure of market expectations of near-term volatility conveyed by S&P 500 stock index option prices. Source: Economic Policy Uncertainty, Bloomberg Finance, L.P., Fidelity Investments (AART), as of 3/31/17

U.S. Stock Valuations No Longer Cheap but Not Extreme

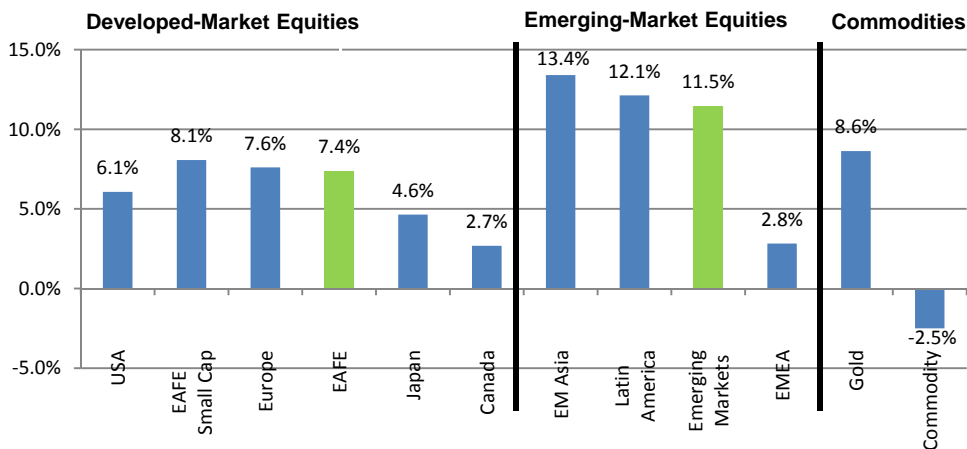

I. S&P 500 Valuations

- ▶ Corporate earnings recovered in Q4 2016 after six consecutive quarters of negative growth, helped by energy-sector profits moving into positive territory for the first time since oil prices began to tumble.
- ▶ The rebound from the profit recession should continue and is supported by an increasing share of companies giving positive guidance, although the trend growth rate is likely to moderate in coming quarters.
- ▶ U.S. large-cap price-to-earnings (P/E) ratios are somewhat above their long-term historical averages, but we believe over the long term that stocks will sustain a valuation level closer to the average of the past 20 years.
- ▶ Valuations have historically had a negative relationship with inflation, but there is room for inflation to rise from today's relatively low levels and still be generally supportive of high P/Es.

Past performance is no guarantee of future results. Price and five-year peak earnings are adjusted for inflation. Sources: Standard & Poor's, Bureau of Labor Statistics, Haver Analytics, Fidelity Investments (AART), as of 3/31/17.

II. Q1 2017 Total Return

- ▶ Non-U.S. equity markets generally posted strong returns during Q1, with currency appreciation enhancing gains in U.S. dollar terms.
- ▶ Emerging-market equities surged, led by Asia and Latin America. Commodity prices generally weakened, but gold bounced back amid sustained political uncertainty in the U.S. and Europe.
- ▶ Price-to-earnings ratios for both developed and emerging-market equities remain attractive versus the U.S. Moreover, the U.S. dollar, despite weakening somewhat over the course of the first quarter, remains at the upper end of historical ranges versus many currencies.
- ▶ Both factors provide a favorable long-term valuation backdrop for international equity returns.

Local Currency (LC) returns refers to the return in local currency (i.e. does not include any impact due to currency exposure). Note: Emerging Market represented a 16.9% weight in ACWI ex-US as of 3/31/17.

* The MSCI China Index captures large and mid cap representation across China B shares, H shares, Red chips, P chips and foreign listings (e.g. ADRs). B shares trade on the Shanghai and Shenzhen exchanges; they are quoted in foreign currencies (Shanghai USD, Shenzhen HKD). H shares trade on the Hong Kong exchange and other foreign exchanges (HKD). Red chips and P chips are incorporated outside of China and trade on the Hong Kong exchange (HKD).

Foreign investments, especially those in emerging markets, involve greater risk and may offer greater potential returns than U.S. investments. This risk includes political and economic uncertainties of foreign countries, as well as the risk of currency fluctuation. Past performance is no guarantee of future results.

Fixed Income Market Returns as of March 31, 2017

Source: Morningstar as of 3/31/17. 3, 5 and 10 year performance numbers are annualized total returns as of 3/31/17.

In general the bond market is volatile, and fixed income securities carry interest rate risk. (As interest rates rise, bond prices usually fall, and vice versa. This effect is usually more pronounced for longer-term securities.) Fixed income securities also carry inflation risk and credit and default risks for both issuers and counterparties. Unlike individual bonds, most bond funds do not have a maturity date, so avoiding losses caused by price volatility by holding them until maturity is not possible. Lower-quality debt securities involve greater risk of default or price changes due to potential changes in the credit quality of the issuer. The value of inflation-protected debt securities tends to change less due to changes in inflation than other types of bonds but may decrease with decreases in inflation or, as with other debt securities, with increases in interest rates.

Market Perspective Notes

Third-party marks are the property of their respective owners; all other marks are the property of FMR LLC.

References to specific security, sector or investment strategy should not be construed as recommendations or investment advice. The statements and opinions are expressed as of March 31, 2017 and subject to change at any time, based on market and other conditions.

Past performance is no guarantee of future results.

Indices are unmanaged and you cannot invest directly in an index.

Keep in mind that investing involves risk. The value of your investment will fluctuate over time and you may gain or lose money.

Investment Risks:

Stock markets, especially foreign markets, are volatile and can decline significantly in response to adverse issuer, political, regulatory, market, or economic developments.

The securities of smaller, less well-known companies can be more volatile than those of larger companies.

Foreign investments, especially those in emerging markets, involve greater risk and may offer greater potential returns than U.S. investments. This risk includes political and economic uncertainties of foreign countries, as well as the risk of currency fluctuation. Investments in smaller companies may involve greater risks than those in larger, more well known companies.

In general the bond market is volatile, and fixed income securities carry interest rate risk. (As interest rates rise, bond prices usually fall, and vice versa. This effect is usually more pronounced for longer-term securities.) Fixed income securities also carry inflation risk and credit and default risks for both issuers and counterparties. Unlike individual bonds, most bond funds do not have a maturity date, so avoiding losses caused by price volatility by holding them until maturity is not possible.

Lower-quality debt securities involve greater risk of default or price changes due to potential changes in the credit quality of the issuer.

Investment Spectrum

Important Information About Investment Risks and Risk Spectrums

Placement of investment options within each risk spectrum is only in relation to the investment options within that specific spectrum. Placement does not reflect risk relative to the investment options shown in the other risk spectrums.

Risk Spectrum for Lifecycle Investment Options: Lifecycle investment options are represented on a separate spectrum because they are generally designed for investors expecting to retire around the year indicated in each investment's name. The investments are managed to gradually become more conservative over time. The investment risks of each lifecycle investment change over time as its asset allocation changes. They are subject to the volatility of the financial markets, including equity and fixed income investments in the U.S. and abroad and may be subject to risks associated with investing in high yield, small cap and foreign securities. Principal investment is not guaranteed at any time, including at or after their target dates.

Risk Spectrum for General Investment Options: This spectrum, with the exception of the Domestic Equity category, is based on Fidelity's analysis of the characteristics of the general investment categories and not on the actual investment options and their holdings, which can change frequently. Investment options in the Domestic Equity category are based on the options' Morningstar categories as of the date indicated. Morningstar categories are based on a fund's style as measured by its underlying portfolio holdings over the past three years and may change at any time. These style calculations do not represent the investment options' objectives and do not predict the investment options' future styles. Investment options are listed in alphabetical order within each investment category. Risk associated with the investment options can vary significantly within each particular investment category and the relative risk of categories may change under certain economic conditions. For a more complete discussion of risk associated with the mutual fund options, please read the prospectuses before making your investment decisions. The spectrum does not represent actual or implied performance.

Any product indicated as being on a watch list has been previously placed in this status by the plan sponsor. This may indicate that a product is subject to additional due diligence by the plan sponsor. This does not indicate a product that is being recommended to be placed on a watch list.

Investment Risks:

Unless specifically stated otherwise in their detailed descriptions, principal invested in any of the Plan's investment options is not guaranteed at any time, including near or during retirement.

The investment risks of each lifecycle fund changes over time as its asset allocation changes. They are subject to the volatility of the financial markets, including equity and fixed income investments in the U.S. and abroad and may be subject to risks associated with investing in high yield, small cap and foreign securities.

Stock markets, especially foreign markets, are volatile and can decline significantly in response to adverse issuer, political, regulatory, market, or economic developments.

Foreign securities are subject to interest-rate, currency-exchange-rate, economic, and political risks, all of which are magnified in emerging markets. These risks are particularly significant for funds that focus on a single country or region.

In general the bond market is volatile, and fixed income securities carry interest rate risk. (As interest rates rise, bond prices usually fall, and vice versa. This effect is usually more pronounced for longer-term securities.) Fixed income securities also carry inflation risk and credit and default risks for both issuers and counterparties. Unlike individual bonds, most bond funds do not have a maturity date, so avoiding losses caused by price volatility by holding them until maturity is not possible.

Investments in lower-quality debt securities generally offer higher yields, but also involve greater risk of default or price changes due to potential changes in the credit quality of the issuer.

Investments in smaller companies may involve greater risks than those in larger, more well known companies.

Because of their narrow focus, sector funds may be more volatile than funds that diversify across many sectors.

Investments in mortgage securities are subject to the risk that principal will be repaid prior to maturity. As a result, when interest rates decline, gains may be reduced, and when interest rates rise, losses may be greater.

(If applicable) Your company stock investment option is neither a mutual fund nor a diversified or managed investment option.

Please see Fund Diagnostics Summary section for important information on Money Market Mutual Funds.

Investment Analysis

Fund Diagnostics Summary – as of 03/31/2017

Understanding investment performance: As you review this update, please remember that the performance data stated represents past performance, which does not guarantee future results. Investment return and principal value of an investment will fluctuate; therefore, you may have a gain or loss when you sell your shares. Current performance may be higher or lower than the performance stated. To learn more or to obtain the most recent month-end performance, call Fidelity or visit www.401k.com (log in, choose plan, select “Investment Choices & Research”, and then pick investment option.)

% Rank in Category is the fund's total-return percentile rank relative to all funds that have the same Morningstar Category. The highest (or most favorable) percentile rank is one and the lowest (or least favorable) percentile rank is 100. The top-performing fund in a category will always receive a rank of one. The number in parentheses represents the number of funds in the category. % Rank in Category is based on total returns, which include reinvested dividends and capital gains, if any, and exclude sales charges.

Total returns are historical and include change in share value and reinvestment of dividends and capital gains, if any. Cumulative total returns are reported as of the period indicated. Life of Fund figures are reported as of the inception date to the period indicated. These figures do not include the effect of sales charges, if any, as these charges are waived for contributions made through your company's employee benefit plans. If sales charges were included, returns would have been lower.

Pre-inception returns: The analysis on these pages may be based, in part, on historical returns for periods prior to the class's actual inception. Generally, these calculated returns reflect the historical performance of an older share class of the investment, which may be adjusted to reflect the fees and expenses of the newer share class. Pre-inception returns are not actual returns and return calculation methodologies utilized by Morningstar, other entities and the investment option may differ. Pre-inception returns generally will be replaced by the actual returns of the newer share class over time. Please click on dedicated web page or refer to the fund prospectus or plan information for specific information regarding fees, expenses and returns.

If Morningstar category performance, count and expense information is displayed for a non SEC registered product, please note this information is for comparison purposes only as non SEC registered products are not included within the respective Morningstar category.

Non SEC registered products in the variable annuity universe will display with Morningstar category performance, count, expense and rank information. These products are included within the Morningstar category for the variable annuity universe; thus, they are ranked within the category.

NOTE: Please see page(s) at the end of the Investment Analysis section for additional information regarding fund performance, fees, and expenses.

Important Information About Money Market Mutual Funds

Fidelity Government Mutual Fund Money Market: *You could lose money by investing in a money market fund. Although the fund seeks to preserve the value of your investment at \$1.00 per share, it cannot guarantee it will do so. An investment in the fund is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. Fidelity Investments and its affiliates, the fund's sponsor, have no legal obligation to provide financial support to money market funds and you should not expect that the sponsor will provide financial support to the fund at any time.*

Fidelity's government and U.S. Treasury money market funds will not impose a fee upon the sale of your shares, nor temporarily suspend your ability to sell shares if the fund's weekly liquid assets fall below 30% of its total assets because of market conditions or other factors.

Non-Fidelity Government Mutual Fund Money Market: *You could lose money by investing in a money market fund. Although the fund seeks to preserve the value of your investment at \$1.00 per share, it cannot guarantee it will do so. An investment in the fund is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. The fund's sponsor has no legal obligation to provide financial support to money market funds and you should not expect that the sponsor will provide financial support to the fund at any time.*

The fund may impose a fee upon the sale of your shares or may temporarily suspend your ability to sell shares if the fund's weekly liquid assets fall below 30% of its total assets because of market conditions or other factors. Any applicable funds will be detailed at the end of the Investment Analysis section. Please see Important Additional Information / Other Information.

Fidelity Institutional Mutual Fund Money Market: *You could lose money by investing in a money market fund. Because the share price of the fund will fluctuate, when you sell your shares they may be worth more or less than what you originally paid for them. The Fund may impose a fee upon the sale of your shares or may temporarily suspend your ability to sell shares if the Fund's liquidity falls below required minimums because of market conditions or other factors. An investment in the fund is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. Fidelity Investments and its affiliates, the fund's sponsor, have no legal obligation to provide financial support to the fund, and you should not expect that the sponsor will provide financial support to the fund at any time.*

Non-Fidelity Institutional Mutual Fund Money Market: *You could lose money by investing in a money market fund. Because the share price of the fund will fluctuate, when you sell your shares they may be worth more or less than what you originally paid for them. The Fund may impose a fee upon the sale of your shares or may temporarily suspend your ability to sell shares if the Fund's liquidity falls below required minimums because of market conditions or other factors. An investment in the fund is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. The fund's sponsor has no legal obligation to provide financial support to the fund, and you should not expect that the sponsor will provide financial support to the fund at any time.*

Fidelity Retail Mutual Fund Money Market: *You could lose money by investing in a money market fund. Although the fund seeks to preserve the value of your investment at \$1.00 per share, it cannot guarantee it will do so. The Fund may impose a fee upon the sale of your shares or may temporarily suspend your ability to sell shares if the Fund's liquidity falls below required minimums because of market conditions or other factors. An investment in the fund is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. Fidelity Investments and its affiliates, the fund's sponsor, have no legal obligation to provide financial support to the fund, and you should not expect that the sponsor will provide financial support to the fund at any time.*

Non-Fidelity Retail Mutual Fund Money Market: *You could lose money by investing in a money market fund. Although the fund seeks to preserve the value of your investment at \$1.00 per share, it cannot guarantee it will do so. The Fund may impose a fee upon the sale of your shares or may temporarily suspend your ability to sell shares if the Fund's liquidity falls below required minimums because of market conditions or other factors. An investment in the fund is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. The fund's sponsor has no legal obligation to provide financial support to the fund and you should not expect that the sponsor will provide financial support to the fund at any time.*

Fidelity Quartile rankings

Top 17 Funds by Asset (with rank) totaling
36.4% of Total Plan Assets

Chart indicates approximate ranking of mutual funds by expense ratios after reductions. The Plan's (or Plans') other investment options are not taken into account. This chart excludes Lifecycle products. Expense reductions may reflect waivers, reimbursements or voluntary caps that expire at any time or on a specific date. See previous pages after Fund Diagnostic Summary for details of expense reductions for each fund.

Expense Ratio after Reduction is the total annual operating expense from the fund's most recent prospectus after any fee waiver and/or expense reimbursements that will reduce any fund operating expenses for no less than one year from the effective date of the fund's registration statement. This number does not include any fee waiver arrangement or expense reimbursement that may be terminated without agreement of the fund's board of trustees during the one-year period.

Approximate rankings are determined by Fidelity on quarterly basis using data available at the time of publication. Fidelity ranks the expense ratio after reductions of each fund within each Morningstar category by first ordering the funds from those with the lowest expenses to those with the highest expenses, and then dividing their numerical order by the number of funds in the category. The highest percentile rank (or most favorable) is 1% and the lowest percentile rank (or least favorable) is 100%. The first quartile represents funds with lower expenses, and the fourth quartile represents funds with higher expenses. Fidelity Quartile Rankings display the funds' quartile rankings within their respective Morningstar categories.

Please see previous Fund Diagnostics for Morningstar Category information.

Although Morningstar gathers information from reliable sources, it cannot guarantee the accuracy, completeness or timeliness of its data. Please refer to the most recent prospectus or annual/semiannual report for the most current and complete information about a fund's fees and expenses.

Important Additional Information

If more than one benchmark is shown, the first listed is the primary benchmark.

The Morningstar Category Average is the average return for the peer group based on the returns of each individual fund within the group, for the period shown. This average assumes reinvestment of dividends and capital gains, if any, and excludes sales charges.

Morningstar, Inc., provided data on the non-Fidelity mutual funds. Although the data is gathered from reliable sources, accuracy and completeness cannot be guaranteed by Morningstar.

©2017 Morningstar, Inc. All rights reserved. The Morningstar information contained herein: 1) is proprietary to Morningstar and/or its content providers; 2) may not be copied or distributed; 3) is not warranted to be accurate, complete, or timely. Neither Morningstar nor its content providers are responsible for any damages or losses arising from any use of this information. Fidelity does not review the Morningstar data, and for mutual fund performance information, you should check the fund's current prospectus for the most up-to-date information concerning applicable loads, fees, and expenses.

©2017 FMR LLC. All rights reserved.

Indices are unmanaged and you cannot invest directly in an index.

Manager Tenure: If a fund has more than one manager, the one with the longest tenure has been used obtain manager tenure.

Other Information:

DOMINI IMPACT EQ R: As of November 30, this fund changed its name from Domini Social Equity Fund.

MIP CL 1: Expense Ratio (Gross) includes management and wrap contract fees. For certain investments, it may also include distribution fees. Please note that the Gross and Net Expense Ratio are the same for this investment.

MIP CL 1: Management Fee includes the costs associated with managing the investments in the pool. The management fee does not include the wrap contract fees, which are paid to third party wrap providers and do not result in any additional compensation to Fidelity. The wrap contract fees are not separately stated but are included in the Expense Ratio and do reduce returns.

FID INTL DISCOVERY K, FID LOW PRICED STK K, FID BLUE CHIP GR K, FID DIVIDEND GR K, FID PURITAN K: On May 9, 2008, an initial offering of the retirement (K) class took place. Returns and expenses prior to that date are those of the non-K, non-advisor class. Had K class expenses been reflected in the returns shown, total returns would have been higher.

FID EXT MKT IDX PR: Returns prior to October 14, 2005 are those of the Investor Class and reflect the Investor Class' expense ratio. Had the Premium Class' expense ratio been reflected, total returns would have been higher.

FID 500 INDEX PR: Returns prior to October 14, 2005 are those of the Investor Class and reflect the Investors Class' expense ratio. Had the Premium Class' expense ratio been reflected, total returns would have been higher.

VANG TOT INTL STK AD: The FTSE Global All Cap ex US Index is part of a range of indices designed to help US investors benchmark their international investments. The index comprises large, mid and small cap stocks globally excluding the US.

MIP CL 1: This investment option is not a mutual fund.

Additional Information about Fees and Expenses

General Information on Fund Expenses

For a mutual fund, the Gross Expense Ratio is the total annual fund or class operating expenses (before waivers or reimbursements) paid by the fund and stated as a percent of the fund's total net assets. Where the investment option is not a mutual fund, the figure displayed in the Gross Expense Ratio field is intended to reflect similar information. However, it may have been calculated using methodologies that differ from those used for mutual funds and may not include all the fees that mutual fund expense ratios are required to reflect. For mutual funds, the values were drawn from their respective prospectuses. For non-mutual fund investment options, the information has been provided by the trustee or plan sponsor. When no ratio is shown for these options it is due to the fact that none was available. Nevertheless, there may be fees and expenses associated with the investment option.

Expense Ratio after Reduction is the total annual operating expense from the fund's most recent prospectus after any fee waiver and/or expense reimbursements that will reduce any fund operating expenses for no less than one year from the effective date of the fund's registration statement. This number does not include any fee waiver arrangement or expense reimbursement that may be terminated without agreement of the fund's board of trustees during the one-year period.

Morningstar does not provide information on funds in reimbursement. For information on non-Fidelity funds in reimbursement, please contact the applicable fund company.

The returns of funds with reimbursed expenses would be lower if their expenses had not been reimbursed.

Morningstar Category Gross Expense Ratio: This figure is calculated by Morningstar and represents the mean average of the gross expense ratio paid by each fund in the Morningstar category. Each share class of a fund is treated as a separate fund. Morningstar uses each fund's most current, publicly available prospectus at the time the average is calculated.

Morningstar Category's Expense Ratio After Reductions: This figure represents the average expense ratio after reductions paid by the funds in the Morningstar category. Morningstar calculated and provided the average based on information reported in each fund's prospectus.

Specific Fund Expense Information

For Fidelity Funds, if the Expense Ratio after Reduction is lower than the Gross Expense Ratio and no fee cap is provided for below, the difference may be attributable to certain broker service and other offset arrangements which may be discontinued at any time.

Expense Ratios After Reductions information for non-Fidelity mutual funds is provided by Morningstar, Inc. and its accuracy cannot be guaranteed. Consult the prospectus for each fund you are interested in to obtain the most current and detailed information on its fees and expenses.

PAX GLB ENV MKT IS: Contractual Expense Ratio Waiver of 0.08 subject to Expiration Date of 12/31/2017

Glossary

Watch List Product: Any product indicated as being on a watch list has been previously placed in this status by the plan sponsor. This may indicate that a product is subject to additional due diligence by the plan sponsor. This does not indicate a product that is being recommended to be placed on a watch list.

Standard Deviation: Statistical measure of how much a return varies over an extended period of time. The more variable the fund's returns, the larger the fund's standard deviation. A higher standard deviation indicates a wider dispersion of past returns and thus greater historical volatility. Standard deviation indicates the volatility of a portfolio's return over time, not the actual performance of the portfolio. Standard deviation measures volatility independent of a benchmark, and it is annualized.

Sharpe Ratio: A risk-adjusted performance measure that help indicate if returns are due to excess risk. It is calculated by dividing the fund's excess returns (fund's average monthly returns minus the risk-free rate (such as that of the 3-month T-bill)) by the standard deviation of those returns. The higher the ratio, the better the fund's return per unit of risk. The Information Ratio (see definition below) is similar to the Sharpe Ratio. The Sharpe Ratio compares the excess return of an asset against the return of a risk free asset but the Information Ratio compares active return to the fund's most relevant benchmark index. Excess Return denotes the return over the risk-free asset while Active Return denotes the return over the benchmark.

Tracking Error: A measure of the deviation of fund performance from index performance (i.e., the underlying index it is intended to either match or outperform). For example, a fund with a tracking error of 20 basis points has earned the return of the index against which it is tracked, plus or minus 20 basis points, 67% of the time. This 67% represents one standard deviation in what is referred to a "normal distribution" in probability theory and statistics. It is called 'Tracking Error' because it describes how well the portfolio can track the benchmark. The annual tracking error is obtained by multiplying the monthly tracking error by 12.

Information Ratio: Shows the risk-adjusted active return of the fund compared to its benchmark. It's a measure of the amount of risk an investment manager took relative to the fund's benchmark to achieve the fund's Alpha (see definition above). It is calculated by dividing Alpha by the Tracking Error, where Tracking Error is the Standard Deviation (see definition above) of Alpha.

Tracking Error measures the extent to which a fund's returns deviates from its benchmark's returns over time. A high ratio means a manager can achieve higher returns more efficiently than one with a low ratio by taking on additional risk. Additional risk could be achieved through leveraging.

Plan / Participant Review
