Board of Trustees
Vermont State Teachers' Retirement System
Montpelier, Vermont 05609

Dear Board Members:

We are pleased to submit this Actuarial Valuation and Review as of June 30, 2017, of the Vermont State Teachers' Retirement System. This report summarizes the actuarial data used in the valuation, analyzes the preceding year's experience, and establishes the funding requirement for the fiscal year ending June 30, 2019.

This report was prepared in accordance with generally accepted actuarial principles and practices at the request of the Board to assist in administering the Retirement System. The census information and financial information on which our calculations were based was prepared by the Office of the State Treasurer. That assistance is gratefully acknowledged.

The actuarial calculations were directed under the supervision of Kathleen Riley and Matthew Strom. We are members of the American Academy of Actuaries and we meet the Qualification Standards of the American Academy of Actuaries to render the actuarial opinion herein. To the best of our knowledge, the information supplied in this actuarial valuation is complete and accurate. Further, in our opinion, the assumptions as approved by the Board are reasonably related to the experience of and the expectations for the System.

We look forward to reviewing this report and to answering any questions at the next Board meeting.

Sincerely,

Segal Consulting, a Member of The Segal Group, Inc.

Section 1: Actuarial Valuation Summary

Purpose and Basis

This report was prepared by Segal Consulting to present a valuation of the Plan as of June 30, 2017, pursuant to section 1942, subsection (n), of Title 16, Chapter 55, Vermont Statutes Annotated, relating to the Vermont State Teachers' Retirement System. The valuation was performed to determine whether the assets and contributions are sufficient to provide the prescribed benefits. The measurements shown in this actuarial valuation may not be applicable for other purposes. In particular, the measures herein are not necessarily appropriate for assessing the sufficiency of Plan assets to cover the estimated cost of settling the Plan's benefit obligations. Future actuarial measurements may differ significantly from the current measurements presented in this report due to such factors as the following: plan experience differing from that anticipated by the economic or demographic assumptions; changes in economic or demographic assumptions; increases or decreases expected as part of the natural operation of the methodology used for these measurements; and changes in plan provisions or applicable law.

Certain disclosure information required by GASB Statements No 67 and 68 as of June 30, 2017 for the System is provided in a separate report.

The contribution requirements presented in this report are based on:

- The benefit provisions of the Pension Plan, as administered by the Board;
- The characteristics of covered active members, inactive members, and retired members and beneficiaries as of June 30, 2017, provided by the Office of the State Treasurer;
- The unaudited assets of the Plan as of June 30, 2017, provided by the Office of the State Treasurer;
- Economic assumptions regarding future salary increases and investment earnings;
- Other actuarial assumptions, regarding employee terminations, retirement, death, etc.; and
- The funding policy prescribed by State statute.

Valuation Highlights

1. Segal strongly recommends an actuarial funding method that targets 100% funding of the actuarial accrued liability. Generally, this implies payments that are ultimately at least enough to cover normal cost, interest on the unfunded actuarial accrued liability and the principal balance. The funding policy set in the Vermont State Pension Code meets this standard.
2. Actual employer contributions made during the fiscal year ending June 30, 2017, were \$82,887,174, or 100.3% of the actuarially determined contribution. In the prior fiscal year, actual employer contributions were \$76,947,869, or 101.1% of the prior year's actuarially determined contribution.
3. The actuarially determined contribution for the fiscal year ending June 30, 2018, is \$88,409,437 as determined with the June 30, 2016, actuarial valuation.
4. The funded ratio (the ratio of the actuarial value of assets to actuarial accrued liability) is 54.2%, compared to the prior year's funded ratio of 58.3%. Before reflecting the assumption changes, this year's funded ratio is 57.6%. This ratio is one measure of funding status and its history is a measure of funding progress. Using the market value of assets, the funded ratio is 53.0%, compared to 55.1% as of the prior valuation date. These measurements are not necessarily appropriate for assessing the sufficiency of Plan assets to cover the estimated cost of settling the System's benefit obligation or the need for or the amount of future contributions.
5. The results of this June 30, 2017, actuarial valuation are used to determine the actuarially determined contribution for the fiscal year ending June 30, 2019, and to estimate the actuarially determined contribution for the fiscal year ending June 30, 2020. The actuarially determined contribution for fiscal 2019 is \$105,640,777, an increase of \$17,231,340 from fiscal 2018. The actuarially determined contribution is equal to the Plan's employer normal cost, plus the amount necessary to amortize the unfunded actuarial accrued liability as of June 30, 2017, over a period ending on June 30, 2038, assuming that the amortization period will remain closed and that the amortization amount will increase annually at the rate of 5% over the preceding year.
6. In accordance with section 1944, subsection (c)(4), of Title 16, Chapter 55, Vermont Statutes Annotated, the 5% factor by which amortization payments are scheduled to increase is set to change to 3% beginning July 1, 2019. This means that, initially, the contribution requirements beginning with the fiscal year ending June 30, 2020, and for several years thereafter will be significantly greater than the requirement for the year ending June 30, 2019. The estimated fiscal 2020 actuarially determined contribution is \$127,827,327.
7. The unfunded actuarial accrued liability is \$1,502,453,387, which is an increase of \$276,725,542 since the prior valuation.
8. The actuarial loss from investment experience is \$10,258,663.
9. The net experience loss from sources other than investment experience was approximately 2.1% of the actuarial accrued liability prior to reflection of assumption changes. Additional detail regarding this loss is shown in *Section 2, Exhibit C*.

10. The rate of return on the market value of assets was 11.2% for the July 1, 2016 to June 30, 2017 plan year. The return on the actuarial value of assets was 7.3% for the same period due to the recognition of prior year's investment gains and losses. This resulted in an actuarial loss when measured against the assumed rate of return of 7.95% (applicable for the year ending June 30, 2017). Given the low fixed income interest rate environment, target asset allocation and expectations of future investment returns for various classes, the Board lowered the investment return assumption to 7.50% effective for this June 30, 2017 actuarial valuation. We advise the Board to continue to monitor actual and anticipated investment returns relative to the assumed long-term rate of return on investments.
11. The actuarial value of assets is 102.4% of the market value of assets. The investment experience in the past years has only been partially recognized in the actuarial value of assets. As the deferred net loss is recognized in future years, the cost of the Plan is likely to increase unless the net loss is offset by future experience. The recognition of the deferred market losses of \$41,034,654 will also have an impact on the future funded ratio. If the net deferred losses were recognized immediately in the actuarial value of assets, the actuarially determined contribution would increase from 15.85% to about 16.25% of payroll.
12. The following changes in actuarial assumptions were approved by the Board:
 - The investment return assumption was lowered from 7.95% to 7.50%.
 - The inflation assumption was lowered from 3.00% to 2.50%.
 - The COLA assumption was lowered from 3.00% to 2.55% for Group A members and from 1.50% to 1.40% for Group C members.
 - The salary increase assumption was lowered by 0.37% at each age.
 - The mortality assumption was updated, as outlined in *Section 4, Exhibit I*.

As a result of these assumption changes, the employer normal cost increased by \$3,690,677 and the actuarial accrued liability increased by \$190,792,964. The total impact was an increase in the actuarially determined contribution of \$12,182,832, or 1.97% of payroll.
13. This report constitutes an actuarial valuation for the purpose of determining the actuarially determined contribution under the Plan's funding policy and measuring the progress of that funding policy. The Net Pension Liability (NPL) and Pension Expense under Governmental Accounting Standards Board (GASB) Statements No. 67 and No. 68, for inclusion in the plan and employer's financial statements as of June 30, 2017, and June 30, 2018, will be provided separately. The actuarially determined contribution in this valuation is expected to be used as the actuarially determined contribution (ADC) for GASB financial reporting.
14. This actuarial report as of June 30, 2017, is based on financial and demographic data as of that date. Changes subsequent to that date are not reflected and will affect future actuarial costs of the Plan.

Summary of Key Valuation Results

		2017	2016*
Actuarially determined employer contributions:	• Actuarially determined employer contributions for fiscal 2019 (and 2018)	\$105,640,777	\$88,409,437
	• Estimated actuarially determined contributions for fiscal 2020 (and 2019)	127,827,327	92,662,983
Actuarial accrued liability for plan year beginning July 1:	• Retired participants and beneficiaries	\$1,978,626,262	\$1,799,477,149
	• Inactive vested participants	31,641,410	36,806,542
	• Active participants	1,142,714,193	1,073,995,212
	• Inactive participants due a refund of employee contributions	129,063,749	127,856,285
	• Total	3,282,045,614	2,942,024,080
	• Employer normal cost for plan year beginning July 1	7,846,377	7,799,081
Assets for plan year beginning July 1:	• Market value of assets (MVA)	\$1,738,557,573	\$1,620,899,749
	• Actuarial value of assets (AVA)	1,779,592,227	1,716,296,235
	• Actuarial value of assets as a percentage of market value of assets	102.36%	105.89%
Funded status for plan year beginning July 1:	• Unfunded actuarial accrued liability based on MVA	\$1,543,488,041	\$1,321,124,331
	• Funded percentage on MVA basis	52.97%	55.09%
	• Unfunded actuarial accrued liability based on AVA	\$1,502,453,387	\$1,225,727,845
	• Funded percentage on AVA basis	54.22%	58.34%
	• Remaining amortization period	21	22
Key assumptions:	• Interest rate	7.50%	7.95%
	• Inflation rate	2.50%	3.00%
Demographic data for plan year beginning July 1:	• Number of retired members and beneficiaries	9,021	8,763
	• Number of vested former members	763	747
	• Number of inactive members entitled to a refund of employee contributions	2,381	2,454
	• Number of active members	10,028	9,919
	• Total payroll	\$607,354,756	\$586,397,072
	• Average payroll	60,566	59,119

* All valuation results shown throughout this report for June 30, 2016 and prior years and all figures in this column were calculated by the prior actuary, Buck Consultants.

Important Information About Actuarial Valuations

An actuarial valuation is a budgeting tool with respect to the financing of future projected obligations of a pension plan. It is an estimated forecast – the actual long-term cost of the Plan will be determined by the actual benefits and expenses paid and the actual investment experience of the Plan.

In order to prepare a valuation, Segal Consulting (“Segal”) relies on a number of input items. These include:

Plan of benefits	Plan provisions define the rules that will be used to determine benefit payments, and those rules, or the interpretation of them, may change over time. Even where they appear precise, outside factors may change how they operate. It is important to keep Segal informed with respect to plan provisions and administrative procedures, and to review the plan summary included in our report to confirm that Segal has correctly interpreted the plan of benefits.
Membership data	An actuarial valuation for a plan is based on data provided to the actuary by the System. Segal does not audit such data for completeness or accuracy, other than reviewing it for obvious inconsistencies compared to prior data and other information that appears unreasonable. It is important for Segal to receive the best possible data and to be informed about any known incomplete or inaccurate data.
Assets	The valuation is based on the market value of assets as of the valuation date, as provided by the System. The System uses an “actuarial value of assets” that differs from market value to gradually reflect year-to-year changes in the market value of assets in determining the contribution requirements.
Actuarial assumptions	In preparing an actuarial valuation, Segal projects the benefits to be paid to existing plan participants for the rest of their lives and the lives of their beneficiaries. This projection requires actuarial assumptions as to the probability of death, disability, withdrawal, and retirement of each participant for each year. In addition, the benefits projected to be paid for each of those events in each future year reflect actuarial assumptions as to salary increases and cost-of-living adjustments. The projected benefits are then discounted to a present value, based on the assumed rate of return that is expected to be achieved on the plan’s assets. There is a reasonable range for each assumption used in the projection and the results may vary materially based on which assumptions are selected. It is important for any user of an actuarial valuation to understand this concept. Actuarial assumptions are periodically reviewed to ensure that future valuations reflect emerging plan experience. While future changes in actuarial assumptions may have a significant impact on the reported results, that does not mean that the previous assumptions were unreasonable.

The user of Segal's actuarial valuation (or other actuarial calculations) should keep the following in mind:

- The actuarial valuation is prepared at the request of the System and Board of Trustees. Segal is not responsible for the use or misuse of its report, particularly by any other party.
- An actuarial valuation is a measurement of the plan's assets and liabilities at a specific date. Accordingly, except where otherwise noted, Segal did not perform an analysis of the potential range of future financial measures. The actual long-term cost of the plan will be determined by the actual benefits and expenses paid and the actual investment experience of the plan.
- Actuarial results in this report are not rounded, but that does not imply precision.
- If the System is aware of any event or trend that was not considered in this valuation that may materially change the results of the valuation, Segal should be advised, so that we can evaluate it.
- Segal does not provide investment, legal, accounting, or tax advice. Segal's valuation is based on our understanding of applicable guidance in these areas and of the plan's provisions, but they may be subject to alternative interpretations. The System should look to its other advisors for expertise in these areas.

As Segal Consulting has no discretionary authority with respect to the management or assets of the Plan, it is not a fiduciary in its capacity as actuaries and consultants with respect to the Plan.

Section 2: Actuarial Valuation Results

A. Membership Data

The Actuarial Valuation and Review considers the number and demographic characteristics of covered participants, including active members, inactive members, retired members and beneficiaries.

This section presents a summary of significant statistical data on these participant groups.

More detailed information for this valuation year and the preceding valuation can be found in *Section 3, Exhibits A and B*.

MEMBER POPULATION: 2008 – 2017

As of July 1	Active Members	Vested Terminated Members*	Retired Members and Beneficiaries	Total Non-Actives	Ratio of Non-Actives to Actives
2008	10,685	705	5,555	6,260	0.59
2009	10,799	721	5,910	6,631	0.61
2010	10,509	718	6,146	6,864	0.65
2011	10,123	647	7,005	7,652	0.76
2012	10,262	793	7,376	8,169	0.80
2013	10,101	751	7,743	8,494	0.84
2014	9,952	740	8,086	8,826	0.89
2015	9,585	1,163	8,484	9,647	1.01
2016	9,919	747	8,763	9,510	0.96
2017	10,028	763	9,021	9,784	0.98

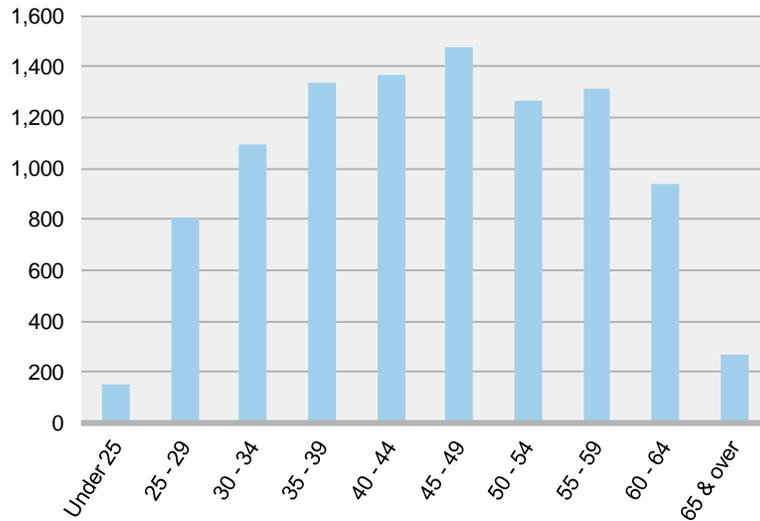

*Excludes terminated participants due a refund of employee contributions

Active Members

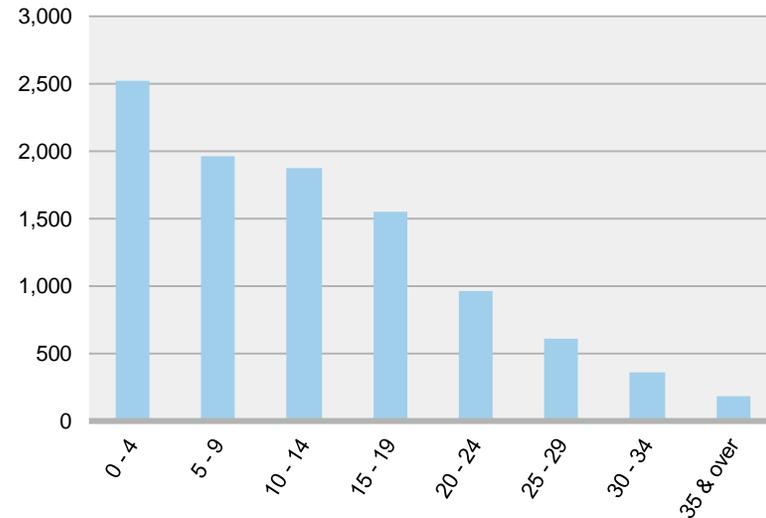

Plan costs are affected by the age, years of creditable service and payroll of active members. In this year's valuation, there were 10,028 active members with an average age of 45.8, average years of creditable service of 12.6 years and average payroll of \$60,566. The 9,919 active members in the prior valuation had an average age of 45.9, average service of 12.7 years and average payroll of \$59,119.

Distribution of Active Members as of July 1, 2017

ACTIVES BY AGE

ACTIVES BY YEARS OF CREDITABLE SERVICE

Inactive Members

In this year's valuation, there were 763 members with a vested right to a deferred or immediate vested benefit.

In addition, there were 2,381 non-vested members entitled to a return of their employee contributions.

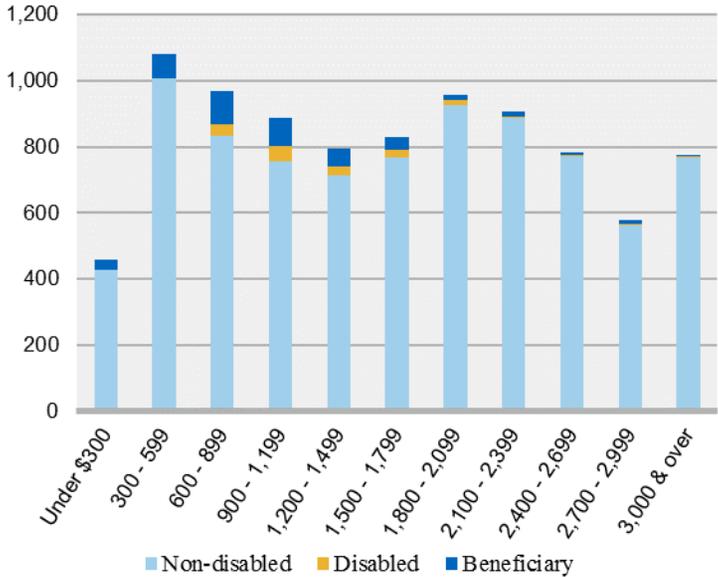

Retired Members and Beneficiaries

As of July 1, 2017, 8,581 retired members (including disability retirees) and 440 beneficiaries were receiving total monthly benefits of \$14,923,544. For comparison, in the previous valuation, there were 8,259 retired members and 504 beneficiaries receiving monthly benefits of \$14,064,068.

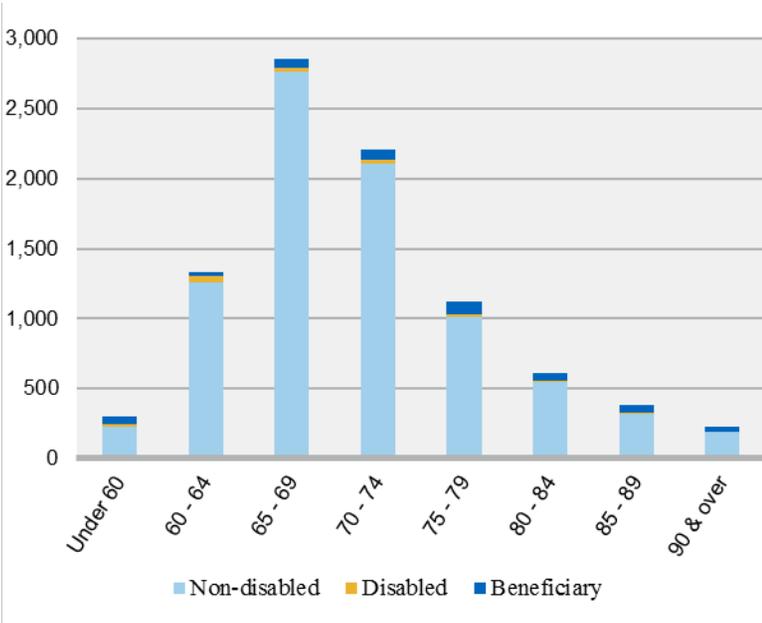

As of July 1, 2017, the average monthly benefit for retired members is \$1,683, compared to \$1,641 in the previous valuation. The average age for retired members is 71.2 in the current valuation, compared with 70.8 in the prior valuation.

Distribution of Pensioners as of July 1, 2017

PENSIONERS BY TYPE AND MONTHLY AMOUNT

PENSIONERS BY TYPE AND BY AGE

Historical Plan Population

The chart below demonstrates the progression of the active population over the last ten years. The chart also shows the growth among the retired population over the same time period.

MEMBERSHIP DATA STATISTICS: 2008 – 2017

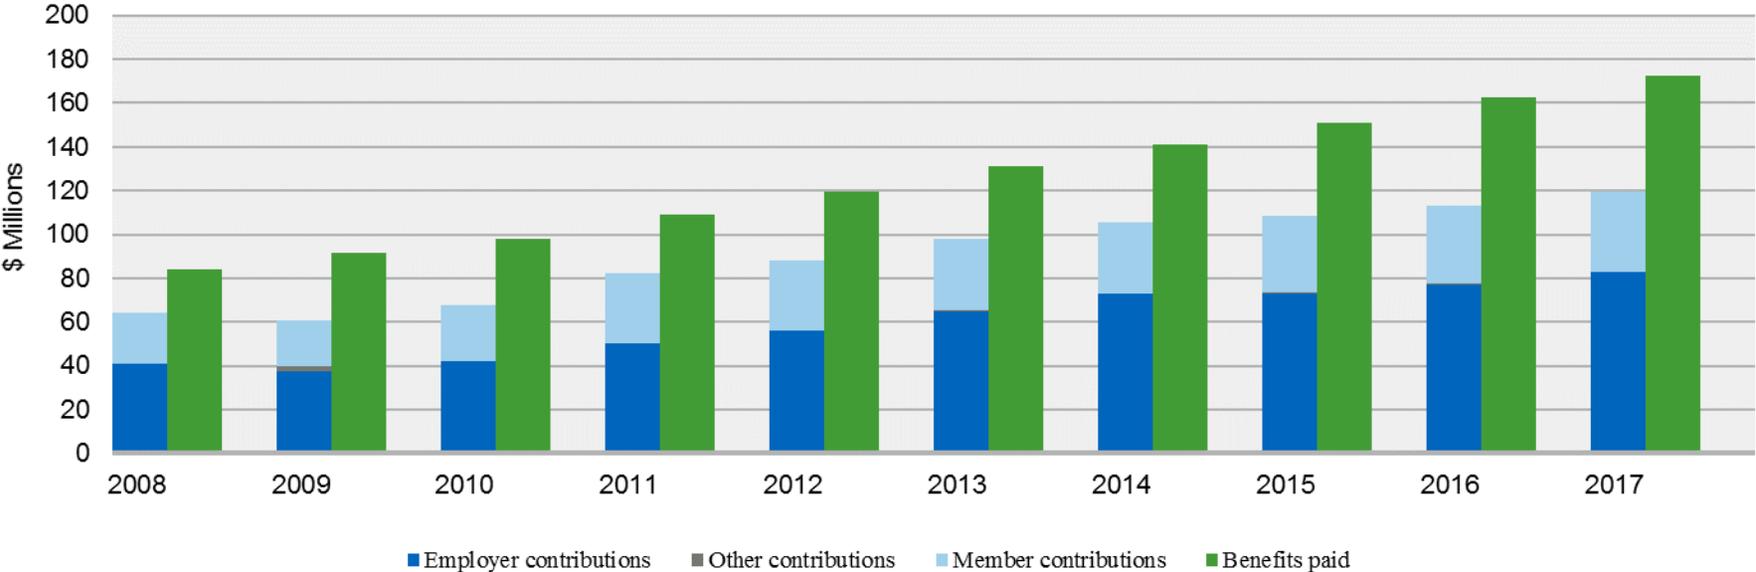

As of July 1	Active Members			Retired Members		
	Count	Average Age	Average Service	Count	Average Age	Average Monthly Amount
2008	10,685	46.9	13.6	5,247	--	\$1,263
2009	10,799	47.1	13.8	5,586	--	1,314
2010	10,509	47.1	13.8	5,831	--	1,319
2011	10,123	46.9	13.8	6,667	--	1,417
2012	10,262	46.9	13.1	7,014	--	1,482
2013	10,101	46.6	13.1	7,356	--	1,514
2014	9,952	46.5	13.2	7,674	69.7	1,547
2015	9,585	46.2	12.9	8,006	70.0	1,614
2016	9,919	45.9	12.7	8,259	70.8	1,641
2017	10,028	45.8	12.6	8,581	71.2	1,683

B. Financial Information

Retirement plan funding anticipates that, over the long term, both contributions and investment earnings (less investment fees and administrative expenses) will be needed to cover benefit payments. Retirement plan assets change as a result of the net impact of these income and expense components.

Additional financial information, including a summary of these transactions for the valuation year, is presented in *Section 3, Exhibits C, D and E*.

**COMPARISON OF CONTRIBUTIONS TO BENEFITS PAID
FOR YEARS ENDED JUNE 30, 2008 – 2017**

It is desirable to have level and predictable plan costs from one year to the next. For this reason, the Board has adopted an asset valuation method that gradually adjusts to market value. Under this valuation method, the full value of market fluctuation is not recognized in a single year and, as a result, the asset value and the plan costs are more stable. The amount of the adjustment to recognize market value is treated as income, which may be positive or negative. Realized and unrealized gains and losses are treated equally and, therefore, the sale of assets has no immediate effect on the actuarial value.

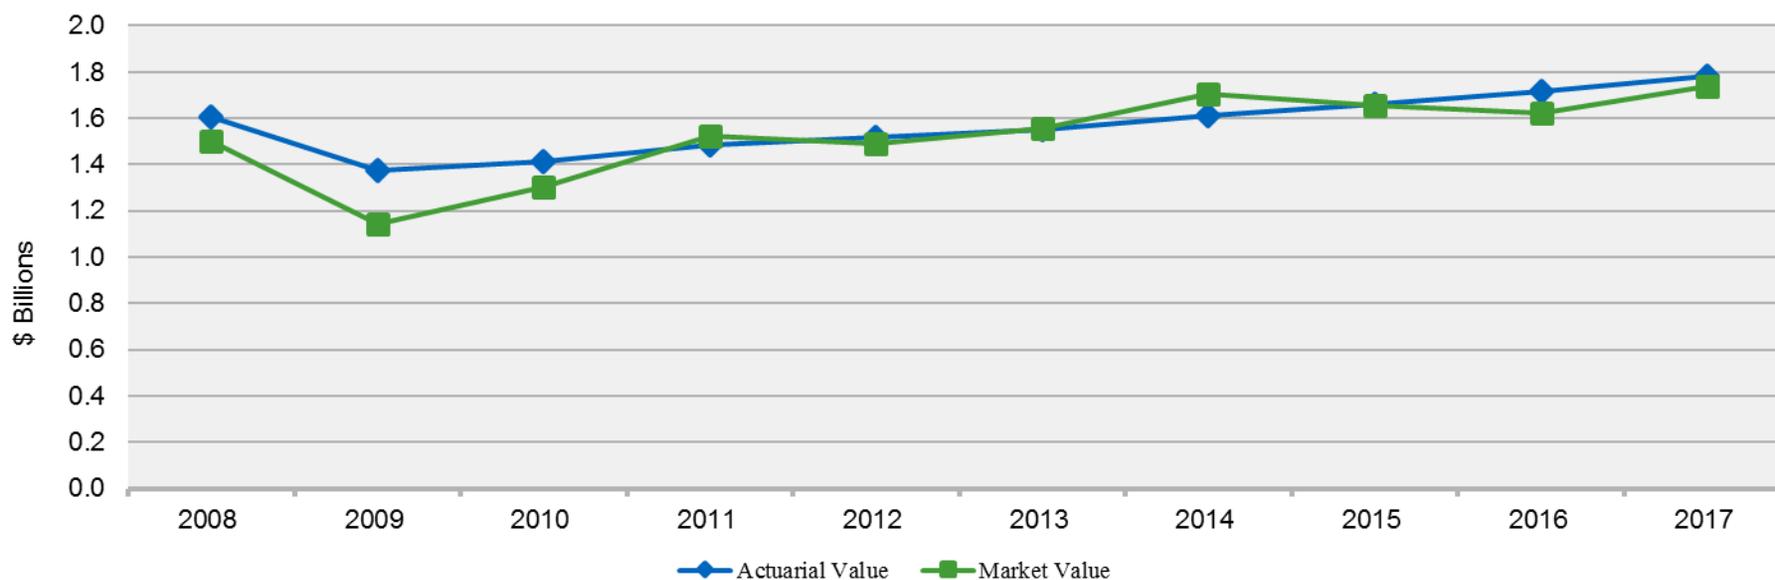

DETERMINATION OF ACTUARIAL VALUE OF ASSETS FOR YEAR ENDED JUNE 30, 2017

1	Actuarial value of assets, June 30, 2016	\$1,716,296,235
2	Net new money, including expected investment income (7.95%)	73,554,655
3	Preliminary asset value: 1 + 2	1,789,850,890
4	Smoothing adjustment	
	(a) Market value, June 30, 2017	1,738,557,573
	(b) Preliminary asset value	1,789,850,890
	(c) Unrecognized appreciation	-51,293,317
	(d) Adjustment	x 20%
		-10,258,663
5	Actuarial value of assets, June 30, 2017: 3 + 4d	\$1,779,592,227

The assets for valuation purposes are 102.36% of market value.

Both the actuarial value and market value of assets are representations of the Plan’s financial status. As investment gains and losses are gradually taken into account, the actuarial value of assets tracks the market value of assets. The actuarial asset value is significant because the Plan’s liabilities are compared to these assets to determine what portion, if any, remains unfunded. Amortization of the unfunded actuarial accrued liability is an important element in determining the contribution requirement.

ACTUARIAL VALUE OF ASSETS VS. MARKET VALUE OF ASSETS AS OF JUNE 30, 2008 – 2017

C. Actuarial Experience

To calculate the actuarially determined contribution, assumptions are made about future events that affect the amount and timing of benefits to be paid and assets to be accumulated. Each year actual experience is measured against the assumptions. If overall experience is more favorable than anticipated (an actuarial gain), the contribution requirement will decrease from the previous year. On the other hand, the contribution requirement will increase if overall actuarial experience is less favorable than expected (an actuarial loss).

Taking account of experience gains or losses in one year without making a change in assumptions reflects the belief that the single year's experience was a short-term development and that, over the long term, experience will return to the original assumptions. For contribution requirements to remain stable, assumptions should approximate experience.

If assumptions are changed, the contribution requirement is adjusted to take into account a change in experience anticipated for all future years.

The net experience loss is \$74,303,004, which includes \$10,258,663 from investment losses and \$64,044,341 in losses from all other sources. The net experience variation from individual sources other than investments was 2.1% of the actuarial accrued liability prior to reflection of the assumption changes. A discussion of the major components of the actuarial experience is on the following pages.

ACTUARIAL EXPERIENCE FOR YEAR ENDED JUNE 30, 2017

1	Net gain/(loss) from investments*	-\$10,258,663
2	Net gain/(loss) from other experience	-64,044,341
3	Net experience gain/(loss): 1 + 2	-\$74,303,004

* Details on next page.

Investment Experience

A major component of projected asset growth is the assumed rate of return. The assumed return should represent the expected long-term rate of return, based on the System's investment policy. The rate of return on the market value of assets was 11.20% for the year ended June 30, 2017.

For valuation purposes, the assumed rate of return on the actuarial value of assets is 7.95% (changed to 7.50%, effective June 30, 2017). The actual rate of return on an actuarial basis for the 2017 plan year was 7.34%. Since the actual return for the year was less than the assumed return, the Plan experienced an actuarial loss during the year ended June 30, 2017 with regard to its investments.

INVESTMENT EXPERIENCE

	Year Ended June 30, 2017	
	Market Value	Actuarial Value
1 Investment income	\$178,144,379	\$123,782,547
2 Average value of assets	1,590,656,472	1,686,052,958
3 Rate of return: $1 \div 2$	11.20%	7.34%
4 Assumed rate of return	7.95%	7.95%
5 Expected investment income: 2×4	\$126,457,189	\$134,041,210
6 Actuarial gain/(loss): $1 - 5$	<u>\$51,687,190</u>	<u>-\$10,258,663</u>

Because actuarial planning is long term, it is useful to see how the assumed investment rate of return has followed actual experience over time. The table below shows the rate of return on an actuarial basis compared to the market value investment return for the last 20 years, including averages over select time periods.

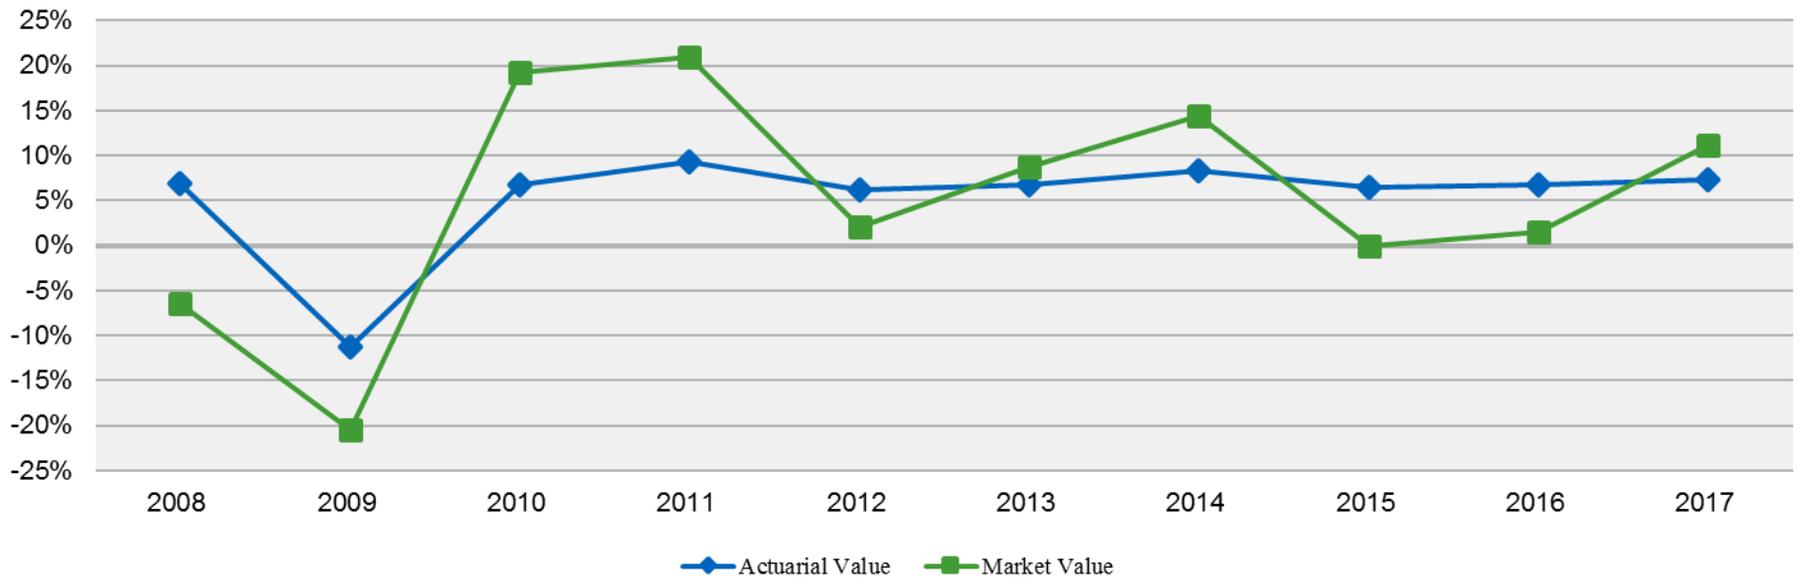

INVESTMENT RETURN – ACTUARIAL VALUE VS. MARKET VALUE: 1998 - 2017

Year Ended June 30	Actuarial Value Investment Return		Market Value Investment Return		Year Ended June 30	Actuarial Value Investment Return		Market Value Investment Return			
	Amount	Percent	Amount	Percent		Amount	Percent	Amount	Percent		
1998	\$111,291,980	15.59%	\$147,347,249	17.08%	2008	\$105,606,299	6.94%	-\$103,733,250	-6.38%		
1999	119,969,096	14.69	114,611,557	11.45	2009	-177,198,490	-11.23	-302,070,164	-20.49

2003	73,318,724	6.34	57,742,544	5.48	2013	99,823,830	6.72	127,041,593	8.70		
2004	92,527,288	7.68	172,235,639	15.86	2014	125,880,755	8.29	219,532,643	14.44		
2005	102,130,985	8.05	120,839,819	9.83	2015	103,064,276	6.50	-1,244,071	-0.07		
2006	112,662,977	8.44	136,026,631	10.35	2016	110,878,140	6.79	24,710,920	1.52		
2007	148,468,597	10.53	250,776,668	17.74	2017*	123,782,547	7.34	178,144,379	11.20		
							Most recent five-year average return		7.12%		6.96%
							Most recent ten-year average return		5.28%		4.42%
							Most recent 15-year average return		6.17%		6.65%
							Most recent 20-year average return		7.13%		6.39%

Note: Each year's yield is weighted by the average asset value in that year.

Subsection B described the actuarial asset valuation method that gradually recognizes fluctuations in the market value rate of return. The goal of this is to stabilize the actuarial rate of return and to produce more level pension plan costs.

MARKET AND ACTUARIAL RATES OF RETURN FOR YEARS ENDED JUNE 30, 2008 - 2017

Administrative Expenses

There is no provision for administrative expenses.

Other Experience

There are other differences between the expected and the actual experience that appear when the new valuation is compared with the projections from the previous valuation. These include:

- the extent of turnover among participants,
- retirement experience (earlier or later than projected),
- mortality (more or fewer deaths than projected),
- the number of disability retirements (more or fewer than projected),
- actual COLAs paid (more or less than assumed), and
- salary increases (greater or smaller than projected).

The net loss from this other experience for the year ended June 30, 2017, amounted to \$64,044,341, which is 2.1% of the actuarial accrued liability prior to reflection of the assumption changes.

EXPERIENCE GAIN/(LOSS) DUE TO CHANGES IN DEMOGRAPHICS FOR YEAR ENDED JUNE 30, 2017

Net turnover	-\$33,675,285
Retirement	-14,888,756
Mortality	-4,776,996
Disability retirements	-18,161
Salary increases for continuing actives	10,257,198
COLA experience	8,993,747
Miscellaneous/methodology differences	<u>-29,936,088</u>
Total	-<u>\$64,044,341</u>

D. Changes in the Actuarial Accrued Liability

The actuarial accrued liability as of June 30, 2017 is \$3,282,045,614, an increase of \$340,021,534, or 11.6%, from the actuarial accrued liability as of the prior valuation date.

Actuarial Assumptions

- The assumption changes reflected in this report are:
 - The investment return assumption was lowered from 7.95% to 7.50%.
 - The inflation assumption was lowered from 3.00% to 2.50%.
 - The COLA assumption was lowered from 3.00% to 2.55% for Group A members and from 1.50% to 1.40% for Group C members.
 - The salary increase assumption was lowered by 0.37% at each age.
 - The mortality assumption was updated to 98% of the RP-2014 White Collar tables with generational projection using Scale SSA-2017 for healthy participants and RP-2014 Disabled Mortality Table with generational projection using Scale SSA-2017 for disabled participants.
- These changes increased the actuarial accrued liability by 6.2% and increased the total normal cost by 9.4%.
- Details on actuarial assumptions and methods are in *Section 4, Exhibit I*.

Plan Provisions

- There were no changes in plan provisions since the prior valuation.
- A summary of plan provisions is in *Section 4, Exhibit II*.

E. Development of Unfunded Actuarial Accrued Liability

DEVELOPMENT OF UNFUNDED ACTUARIAL ACCRUED LIABILITY FOR YEAR ENDED JUNE 30, 2017

1	Unfunded actuarial accrued liability at beginning of year	\$1,225,727,845
2	Normal cost at beginning of year	35,383,370
3	Total contributions	-119,271,111
4	Interest	
	• For whole year on 1 + 2	\$100,258,342
	• For half year on 3	<u>-4,741,027</u>
	Total interest	95,517,315
5	Expected unfunded actuarial accrued liability	\$1,237,357,419
6	Changes due to:	
	• (Gain)/loss	74,303,004
	• Assumptions	190,792,964
	• Funding method	0
	• Plan provisions	<u>0</u>
	Total changes	<u>\$265,095,968</u>
7	Unfunded actuarial accrued liability at end of year	<u>\$1,502,453,387</u>

F. Actuarially Determined Contribution

The actuarially determined contribution is equal to the employer normal cost payment and a payment on the unfunded actuarial accrued liability. The statute governing the System specifies the funding policy used to calculate the actuarially determined contribution based on a closed amortization period ending on June 30, 2038. As of July 1, 2017, there are 21 years remaining on this schedule.

The actuarially determined contribution for the fiscal year ending June 30, 2018, is \$88,409,437 as determined with the June 30, 2016, actuarial valuation. The results of this June 30, 2017, actuarial valuation are used to determine the actuarially determined contribution for the fiscal year ending June 30, 2019, and to estimate the actuarially determined contribution for the fiscal year ending June 30, 2020.

The preliminary contribution requirement as of July 1, 2017, is based on the data previously described, the actuarial assumptions and Plan provisions described in *Section 4*, including all changes affecting future costs adopted at the time of the actuarial valuation, actuarial gains and losses, and changes in the actuarial assumptions.

PRELIMINARY CONTRIBUTION REQUIREMENT

		Year Beginning July 1			
		2017		2016	
		Amount	% of Payroll	Amount	% of Payroll
1	Total normal cost, adjusted for timing*	\$41,605,239	6.54%	\$35,657,949	6.08%
2	Expected employee contributions	<u>-33,758,862</u>	<u>-5.31%</u>	<u>-27,858,868</u>	<u>-4.75%</u>
3	Employer normal cost: 1 + 2	7,846,377	1.23%	7,799,081	1.33%
4	Actuarial accrued liability	3,282,045,614		2,942,024,080	
5	Actuarial value of assets	1,779,592,227		1,716,296,235	
6	Unfunded actuarial accrued liability: 4 - 5	1,502,453,387		1,225,727,845	
7	Payment on unfunded actuarial accrued liability, adjusted for timing*	92,913,342	14.62%	76,250,643	13.00%
8	Preliminary contribution requirement: 3 + 7	<u>\$100,759,719</u>	<u>15.85%</u>	<u>\$84,049,724</u>	<u>14.33%</u>
9	Projected payroll	\$635,759,343		\$586,397,072	

*Contributions are assumed to be paid at the middle of the year.

Reconciliation of Preliminary Contribution Requirement

The chart below details the changes in the preliminary contribution requirement from the prior valuation to the current year's valuation.

RECONCILIATION OF PRELIMINARY CONTRIBUTION REQUIREMENT FROM JULY 1, 2016 TO JULY 1, 2017

	Amount	% of Payroll
Preliminary contribution requirement as of July 1, 2016	\$84,049,724	14.33%
Effect of:		
• Plan amendment(s)	0	0.00%
• Change in asset method	0	0.00%
• Expected change in amortization payment due to payroll growth	3,812,532	0.60%
• Change in amortization period	0	0.00%
• Change in actuarial assumptions	12,182,832	1.97%
• Total contributions (more)/less than actuarially determined contribution	-424,284	-0.07%
• Investment (gain)/loss	660,269	0.10%
• Other gains and losses on accrued liability	3,348,663	0.53%
• Net effect of other changes, including composition and number of participants, payroll	-2,870,017	-1.61%
Total change	16,709,995	1.52%
Preliminary contribution requirement as of July 1, 2017	\$100,759,719	15.85%

G. Amortization Schedule for Unfunded Actuarial Accrued Liability

A schedule of projected future unfunded actuarial accrued liability payments is shown below.

UNFUNDED LIABILITY AMORTIZATION SCHEDULE

As of June 30	Balance	Amortization Payment (Year Following)
2017	\$1,502,453,387	\$92,913,342
2018	1,518,802,788	97,559,009
2019	1,531,561,663	119,503,106*
2020	1,522,525,331	123,088,199
2021	1,509,094,169	126,780,845
2022	1,490,827,054	130,584,270
2023	1,467,246,430	134,501,798
2024	1,437,835,480	138,536,852
2025	1,402,035,075	142,692,958
2026	1,359,240,498	146,973,747
2027	1,308,797,911	151,382,959
2028	1,250,000,562	155,924,448
2029	1,182,084,696	160,602,181
2030	1,104,225,162	165,420,247
2031	1,015,530,687	170,382,854
2032	915,038,785	175,494,340
2033	801,710,290	180,759,170
2034	674,423,465	186,181,945
2035	531,967,676	191,767,403
2036	373,036,576	197,520,426
2037	196,220,783	203,446,038
2038	0	0

* Beginning July 1, 2019 and each year thereafter, the annual payment to amortize the unfunded actuarial liability will be calculated based upon installments increasing at a rate of 3% per year instead of 5%.

H. Projection of Actuarially Determined Contribution for Following Two Fiscal Years

On the basis of the June 30, 2017, actuarial valuation, the employer normal cost rate is 1.23%. This rate is applied to the projected payrolls for fiscal 2019 and fiscal 2020 to determine the employer normal cost for each year. The payment on the unfunded liability is added to the employer normal cost to determine the actuarially determined contribution for the fiscal year ending June 30, 2019, and to estimate the actuarially determined contribution for the fiscal year ending June 30, 2020, as shown below. The final actuarially determined contribution for fiscal 2020 will be determined with the next valuation.

ACTUARIALLY DETERMINED CONTRIBUTION: 2019 – 2020

Fiscal Year Ended June 30	Projected Payroll*	Normal Cost Rate	Projected Contributions		
			Normal Cost	Unfunded Liability	Total
2019	\$654,832,123	1.23%	\$8,081,768	\$97,559,009	\$105,640,777
2020	674,477,087	1.23%	8,324,221	119,503,106	127,827,327

* In these projections, total payroll is assumed to increase by 3% each year.

I. History of Employer Contributions

A history of the most recent years of contributions is shown below.

HISTORY OF EMPLOYER CONTRIBUTIONS: 2009 – 2018

Fiscal Year Ended June 30	Actuarially Determined Employer Contribution		Actual Employer Contribution		Percent Contributed
	Amount*	Percentage of Payroll**	Amount	Percentage of Payroll**	
2009	\$37,077,050	6.88%	\$37,349,818	6.93%	100.74%
2010	41,503,002	7.41%	41,920,603	7.49%	101.01%
2011	48,233,006	8.22%	50,268,131	8.57%	104.22%
2012	51,241,932	8.72%	56,152,011	9.56%	109.58%
2013	60,182,755	10.51%	65,086,320	11.37%	108.15%
2014	68,352,825	11.66%	72,668,413	12.39%	106.31%
2015	72,857,863	14.90%	72,908,805	14.91%	100.07%
2016	76,102,909	12.84%	76,947,869	12.98%	101.11%
2017	82,659,576	14.39%	82,887,174	14.43%	100.28%
2018	88,409,437	14.64%	--	--	--

* Budgeted contribution amount from prior valuation report

**Based on expected payroll

J. Actuarial Balance Sheet

An overview of the Plan’s funding is provided by an Actuarial Balance Sheet, which compares the total liabilities (current and future) to the total assets (current and future). The liabilities are calculated by determining the amount and timing of all future payments that will be made by the Plan for current participants. These payments are discounted at the valuation interest rate to the date of the valuation, thereby determining the present value of all benefits, referred to as the “liability” of the Plan.

Second, this liability is compared to the assets. The “assets” for this purpose include the net amount of assets already accumulated by the Plan, the present value of future member contributions, the present value of future employer normal cost contributions, and the present value of future employer amortization payments for the unfunded actuarial accrued liability.

ACTUARIAL BALANCE SHEET

	Year Ended	
	June 30, 2017	June 30, 2016
Liabilities		
• Present value of benefits for retired participants and beneficiaries	\$1,978,626,262	\$1,799,477,149
• Present value of benefits for inactive former participants	160,705,159	164,662,827
• Present value of benefits for active participants	<u>1,426,387,303</u>	<u>1,301,043,150</u>
Total liabilities	\$3,565,718,724	\$3,265,183,126
Assets		
• Total valuation value of assets	\$1,779,592,227	\$1,716,296,235
• Present value of future contributions by members	250,319,947	204,313,115
• Present value of future employer contributions for:		
» Entry age cost	33,353,163	40,376,048
» Unfunded actuarial accrued liability	<u>1,502,453,387</u>	<u>1,225,727,845</u>
Total of current and future assets	<u>\$3,565,718,724</u>	<u>\$3,265,183,126</u>

Section 3: Supplemental Information

EXHIBIT A – TABLE OF PLAN COVERAGE

Category	As of July 1		Change From Prior Year
	2017*	2016	
Active members in valuation:			
• Number	10,028	9,919	1.1%
• Average age	45.8	45.9	-0.1
• Average years of creditable service	12.6	12.7	-0.1
• Total payroll	\$607,354,756	\$586,397,072	3.6%
• Average payroll	60,566	59,119	2.4%
• Total active vested members	7,508	7,435	1.0%
Inactive members:			
• Number of terminated vested	763	747	2.1%
• Number of other non-vested inactives	2,381	2,454	-3.0%
Retired members:			
• Number in pay status	8,422	8,106	3.9%
• Average age	71.3	70.9	0.4
• Average monthly benefit	\$1,690	\$1,648	2.5%
Disability retirees:			
• Number in pay status	159	153	3.9%
• Average age	68.0	68.1	-0.1
• Average monthly benefit	\$1,323	\$1,263	4.8%
Beneficiaries:			
• Number in pay status	440	504	-12.7%
• Average age	72.8	71.1	1.7
• Average monthly benefit	\$1,094	\$1,009	8.4%

*In 2017, QDROs were included in the retired participant counts rather than the beneficiary counts.

EXHIBIT B – RECONCILIATION OF MEMBERSHIP DATA

* On a market basis, net of investment fees

** Includes depreciation and health/life insurance expenses (2014 and prior)

*** Includes "other expenses"

EXHIBIT F – DEFINITION OF PENSION TERMS

The following list defines certain technical terms for the convenience of the reader:

Actuarial Accrued Liability for Actives:	The equivalent of the accumulated normal costs allocated to the years before the valuation date.
Actuarial Accrued Liability for Pensioners:	The single-sum value of lifetime benefits to existing pensioners. This sum takes into account life expectancies appropriate to the ages of the pensioners and the interest that the sum is expected to earn before it is entirely paid out in benefits.
Actuarial Cost Method:	A procedure allocating the Actuarial Present Value of Future Benefits to various time periods; a method used to determine the Normal Cost and the Actuarial Accrued Liability that are used to determine the actuarially determined contribution.
Actuarial Gain or Loss:	A measure of the difference between actual experience and expected based upon a set of Actuarial Assumptions, during the period between two Actuarial Valuation dates. Through the actuarial assumptions, rates of decrements, rates of salary increases, and rates of fund earnings have been forecasted. To the extent that actual experience differs from that assumed, Actuarial Accrued Liabilities emerge that may be the same as forecasted, or may be larger or smaller than projected. Actuarial gains are due to favorable experience, e.g., assets earn more than projected, salary increases are less than assumed, members retire later than assumed, etc. Favorable experience means actual results produce actuarial liabilities not as large as projected by the actuarial assumptions. On the other hand, actuarial losses are the result of unfavorable experience, i.e., actual results yield actuarial liabilities that are larger than projected. Actuarial gains will shorten the time required for funding the actuarial balance sheet deficiency while actuarial losses will lengthen the funding period.
Actuarially Equivalent:	Of equal actuarial present value, determined as of a given date and based on a given set of Actuarial Assumptions.
Actuarial Present Value (APV):	<p>The value of an amount or series of amounts payable or receivable at various times, determined as of a given date by the application of a particular set of Actuarial Assumptions. Each such amount or series of amounts is:</p> <p>Adjusted for the probable financial effect of certain intervening events (such as changes in compensation levels, marital status, etc.)</p> <p>Multiplied by the probability of the occurrence of an event (such as survival, death, disability, withdrawal, etc.) on which the payment is conditioned, and</p> <p>Discounted according to an assumed rate (or rates) of return to reflect the time value of money.</p>

Actuarial Present Value of Future Plan Benefits:	The Actuarial Present Value of benefit amounts expected to be paid at various future times under a particular set of Actuarial Assumptions, taking into account such items as the effect of advancement in age, anticipated future compensation, and future service credits. The Actuarial Present Value of Future Plan Benefits includes the liabilities for active members, retired members, beneficiaries receiving benefits, and inactive members entitled to either a refund or a future retirement benefit. Expressed another way, it is the value that would have to be invested on the valuation date so that the amount invested plus investment earnings would provide sufficient assets to pay all projected benefits and expenses when due.
Actuarial Valuation:	The determination, as of a valuation date, of the Normal Cost, Actuarial Accrued Liability, Actuarial Value of Assets, and related Actuarial Present Values for a plan. An Actuarial Valuation for a governmental retirement system typically also includes calculations of items needed for compliance with GASB, such as the Actuarially Determined Contribution (ADC) and the Net Pension Liability (NPL).
Actuarial Value of Assets (AVA):	The value of the Fund's assets as of a given date, used by the actuary for valuation purposes. This may be the market or fair value of plan assets, but commonly plans use a smoothed value in order to reduce the year-to-year volatility of calculated results, such as the funded ratio and the ADC.
Actuarially Determined:	Values that have been determined utilizing the principles of actuarial science. An actuarially determined value is derived by application of the appropriate actuarial assumptions to specified values determined by provisions of the law.
Actuarially Determined Contribution (ADC):	The employer's periodic required contributions, expressed as a dollar amount or a percentage of covered plan compensation, determined under the Plan's funding policy. The ADC consists of the Employer Normal Cost and the Amortization Payment.
Amortization Method:	A method for determining the Amortization Payment. The most common methods used are level dollar and level percentage of payroll. Under the Level Dollar method, the Amortization Payment is one of a stream of payments, all equal, whose Actuarial Present Value is equal to the UAAL. Under the Level Percentage of Pay method, the Amortization Payment is one of a stream of increasing payments, whose Actuarial Present Value is equal to the UAAL. Under the Level Percentage of Pay method, the stream of payments increases at the assumed rate at which total covered payroll of all active members will increase.
Amortization Payment:	The portion of the pension plan contribution, or ADC, that is designed to pay interest on and to amortize the Unfunded Actuarial Accrued Liability.
Assumptions or Actuarial Assumptions:	The estimates upon which the cost of the Fund is calculated, including: <u>Investment return</u> - the rate of investment yield that the Fund will earn over the long-term future;

	<p><u>Mortality rates</u> - the death rates of employees and pensioners; life expectancy is based on these rates;</p> <p><u>Retirement rates</u> - the rate or probability of retirement at a given age;</p> <p><u>Withdrawal rates</u> - the rates at which employees of various ages are expected to leave employment for reasons other than death, disability, or retirement;</p> <p><u>Salary increase rates</u> - the rates of salary increase due to inflation and productivity growth.</p>
Closed Amortization Period:	A specific number of years that is counted down by one each year, and therefore declines to zero with the passage of time. For example, if the amortization period is initially set at 30 years, it is 29 years at the end of one year, 28 years at the end of two years, etc. See Open Amortization Period.
Decrements:	Those causes/events due to which a member's status (active-inactive-retiree-beneficiary) changes, that is: death, retirement, disability, or withdrawal.
Defined Benefit Plan:	A retirement plan in which benefits are defined by a formula applied to the member's compensation and/or years of service.
Defined Contribution Plan:	A retirement plan, such as a 401(k) plan, a 403(b) plan, or a 457 plan, in which the contributions to the plan are assigned to an account for each member, the plan's earnings are allocated to each account, and each member's benefits are a direct function of the account balance.
Employer Normal Cost:	The portion of the Normal Cost to be paid by the employer. This is equal to the Normal Cost less expected member contributions.
Experience Study:	A periodic review and analysis of the actual experience of the Fund that may lead to a revision of one or more Actuarial Assumptions. Actual rates of decrement and salary increases are compared to the actuarially assumed values and modified as deemed appropriate by the Actuary.
Funded Ratio:	The ratio of the Actuarial Value of Assets (AVA) to the Actuarial Accrued Liability (AAL). Plans sometimes calculate a market funded ratio, using the market value of assets (MVA), rather than the AVA.
GASB 67 and GASB 68:	Governmental Accounting Standards Board (GASB) Statements No. 67 and No. 68. These are the governmental accounting standards that set the accounting rules for public retirement systems and the employers that sponsor or contribute to them. Statement No. 68 sets the accounting rules for the employers that sponsor or contribute to public retirement systems, while Statement No. 67 sets the rules for the systems themselves.
Investment Return:	The rate of earnings of the Fund from its investments, including interest, dividends and capital gain and loss adjustments, computed as a percentage of the average value of the

	fund. For actuarial purposes, the investment return often reflects a smoothing of the capital gains and losses to avoid significant swings in the value of assets from one year to the next.
Net Pension Liability (NPL):	The Net Pension Liability is equal to the Total Pension Liability minus the Plan Fiduciary Net Position.
Normal Cost:	That portion of the Actuarial Present Value of pension plan benefits and expenses allocated to a valuation year by the Actuarial Cost Method. Any payment with respect to an Unfunded Actuarial Accrued Liability is not part of Normal Cost (see Amortization Payment). For pension plan benefits that are provided in part by employee contributions, Normal Cost refers to the total of employee contributions and employer Normal Cost unless otherwise specifically stated.
Open Amortization Period:	An open amortization period is one that is used to determine the Amortization Payment, but which does not change over time. If the initial period is set as 30 years, the same 30-year period is used in determining the Amortization Period each year. In theory, if an Open Amortization Period with level percentage of payroll is used to amortize the Unfunded Actuarial Accrued Liability, the UAAL will never decrease, but will become smaller each year, in relation to covered payroll, if the Actuarial Assumptions are realized.
Plan Fiduciary Net Position:	Market value of assets.
Total Pension Liability (TPL):	The actuarial accrued liability under the entry age normal cost method and based on the blended discount rate as described in GASB 67 and 68.
Unfunded Actuarial Accrued Liability (UAAL):	The excess of the Actuarial Accrued Liability over the Actuarial Value of Assets. This value may be negative, in which case it may be expressed as a negative Unfunded Actuarial Accrued Liability, also called the Funding Surplus.
Valuation Date or Actuarial Valuation Date:	The date as of which the value of assets is determined and as of which the Actuarial Present Value of Future Plan Benefits is determined. The expected benefits to be paid in the future are discounted to this date.

Section 4: Actuarial Valuation Basis

EXHIBIT I – ACTUARIAL ASSUMPTIONS AND ACTUARIAL COST METHOD

Rationale for Assumptions:	The information and analysis used in selecting each assumption (except for economic assumptions and mortality tables) that has a significant effect on this actuarial valuation is shown in the Actuarial Experience Study dated March 2, 2016 (as prepared by Buck Consultants). Economic assumptions, including inflation, investment return, and assumed cost-of-living adjustment increases were studied and adopted by the Board on July 13, 2017. Mortality table assumptions were studied and adopted by the Board on September 25, 2017. Rates of annual increase in salary were modified and adopted by the Board on September 25, 2017.																		
Inflation:	2.50%.																		
Investment Return:	7.50%. The investment return assumption is a long-term estimate derived from historical data, current and recent market expectations, and professional judgment. As part of the analysis, a building block approach was used that reflects inflation expectations and anticipated risk premiums for each of the portfolio's asset classes, as well as the Plan's target asset allocation.																		
Salary Increases:	<table border="1"> <thead> <tr> <th data-bbox="632 904 884 985">Age</th> <th data-bbox="890 904 1192 985">Annual Rate of Salary Increase (%)</th> </tr> </thead> <tbody> <tr> <td data-bbox="632 990 884 1027">25</td> <td data-bbox="890 990 1192 1027">7.78%</td> </tr> <tr> <td data-bbox="632 1032 884 1070">30</td> <td data-bbox="890 1032 1192 1070">6.47%</td> </tr> <tr> <td data-bbox="632 1075 884 1112">35</td> <td data-bbox="890 1075 1192 1112">5.60%</td> </tr> <tr> <td data-bbox="632 1117 884 1154">40</td> <td data-bbox="890 1117 1192 1154">4.92%</td> </tr> <tr> <td data-bbox="632 1159 884 1196">45</td> <td data-bbox="890 1159 1192 1196">4.43%</td> </tr> <tr> <td data-bbox="632 1201 884 1239">50</td> <td data-bbox="890 1201 1192 1239">4.09%</td> </tr> <tr> <td data-bbox="632 1243 884 1281">55</td> <td data-bbox="890 1243 1192 1281">3.85%</td> </tr> <tr> <td data-bbox="632 1286 884 1323">60</td> <td data-bbox="890 1286 1192 1323">3.75%</td> </tr> </tbody> </table>	Age	Annual Rate of Salary Increase (%)	25	7.78%	30	6.47%	35	5.60%	40	4.92%	45	4.43%	50	4.09%	55	3.85%	60	3.75%
Age	Annual Rate of Salary Increase (%)																		
25	7.78%																		
30	6.47%																		
35	5.60%																		
40	4.92%																		
45	4.43%																		
50	4.09%																		
55	3.85%																		
60	3.75%																		

Cost-of-Living Adjustments: Assumed to occur on January 1 following one year of retirement at the rate of 2.55% per annum for Group A members and 1.40% per annum for Group C members (beginning at age 62 for Group C members who elect reduced early retirement).

Mortality Rates:

Death in Active Service:

- All Groups 98% of RP-2014 White Collar Employee with generational projection using Scale SSA-2017.

Healthy Post-retirement:

- All Groups 98% of RP-2014 White Collar Annuitant with generational projection using Scale SSA-2017.

Disabled Post-retirement:

- All Groups RP-2014 Disabled Mortality Table with generational projection using Scale SSA-2017.

The tables with the generational projection to the ages of participants as of the measurement date reasonably reflect the mortality experience of the Plan as of the measurement date.

The mortality rates were based on historical and current demographic data, adjusted to reflect health characteristics of the various industries and estimated future experience and professional judgment. As part of the analysis, a comparison was made between the actual amount of deaths by benefit amount and the projected amount based on the prior assumption over the five-year period ending June 30, 2016. The mortality tables were then adjusted to future years using a generational projection with Scale SSA-2017 to reflect future mortality improvement.

Separation from Service before Retirement (Due to Withdrawal and Disability): Representative values of the assumed annual rates of withdrawal and disability are as follows:

Age	Rate (%)			
	Withdrawal		Disability	
	Male	Female	Male	Female
25	21.00%	20.00%	0.005%	0.008%
30	12.60	14.00	0.008	0.008
35	8.40	11.30	0.010	0.008
40	6.50	9.03	0.015	0.010
45	5.80	6.30	0.026	0.023
50	5.40	5.25	0.067	0.070
55	5.40	5.04	0.044	0.048
60	5.40	5.04	0.147	0.084

Retirement Rates:

Age	Reduced Early Retirement		Full Early Retirement
	Group A	Group C	Grandfathered (Group C)
55	6.13%	6.13%	6.13%
56	6.25	6.25	6.25
57	6.25	6.25	6.25
58	6.25	6.25	6.25
59	9.38	9.38	9.38
60	12.50	18.75	18.75
61	18.75	18.75	18.75

Age	Service Retirement		
	Group A	Group C	
		Non-grandfathered	Grandfathered
60	12.50%	17.00%	N/A
61	18.80	17.00	N/A
62	25.00	20.00	22.00%
63	22.00	22.00	22.00
64	22.00	22.00	22.00
65	33.00	33.00	33.00
66	33.00	33.00	33.00
67	33.00	33.00	33.00
68	22.00	22.00	22.00
69	33.00	33.00	33.00
70	100.00	100.00	100.00

Non-grandfathered members are assumed to retire with 25% probability if they are first eligible for service retirement on or before age 62 and 27.5% probability if they are first eligible for service retirement between age 62 and age 65.

Group A and Grandfathered Group C members are assumed to retire at the following rates upon completion of 30 years of creditable service:

Age	Retirement After 30 Years of Service	
	Group A	Grandfathered (Group C)
49	0.00%	0.00%
50	40.00	40.00
51	20.00	20.00
52	20.00	20.00
53	20.00	20.00
54	20.00	20.00
55	20.00	8.75
56	10.00	6.25
57	10.00	6.25
58	10.00	10.00
59	10.00	10.00
60	30.00	25.00
61	25.50	17.00

The retirement rates were based on historical and current demographic data, adjusted to reflect conditions of the various industries, and estimated future experience and professional judgment. As part of the analysis, a comparison was made between the actual number of retirements by age and the projected number based on the prior assumption over the four-year period ending June 30, 2014.

Inactive Members:

Valuation liability equals 332.5% of accumulated contributions.

Future Administrative Expenses:

No provisions made.

Unknown Data for Participants:

Same as those exhibited by participants with similar known characteristics. If not specified, participants are assumed to be male.

Percent Married:

85% of male members and 35% of female members are assumed to be married.

Age of Spouse:	Females three years younger than males.
Actuarial Value of Assets:	The amount of the assets for valuation purposes equals the preliminary asset value plus 20% of the difference between market and preliminary asset values. The preliminary asset value is equal to the previous year's asset value (for valuation purposes) adjusted for contributions less benefit payments and expenses plus expected investment income. If necessary, a further adjustment is made to ensure that the valuation assets are within 20% of the market value.
Actuarial Cost Method:	Entry Age Actuarial Cost Method. Entry Age is the age at date of employment or, if date is unknown, current age minus years of service. Normal Cost and Actuarial Accrued Liability are calculated on an individual basis and are allocated by salary, with Normal Cost determined using the plan of benefits applicable to each participant.
Changes in Actuarial Assumptions:	Based on reviews of economic assumptions, rates of mortality and future expectations of experience, the following actuarial assumptions was changed: <ul style="list-style-type: none"> • Assumed inflation was lowered from 3.00% to 2.50%. • Investment return was lowered from 7.95% to 7.50%. • Salary increase assumption was lowered by 0.37% at each age. • Assumed COLA increases were lowered from 3.00% to 2.55% for Group A and 1.50% to 1.40% for Group C. • Mortality tables were updated from RP-2000 with static projection to 98% of the RP-2014 White Collar Table with generational improvement for healthy participants and the RP-2014 Disabled Mortality Table with generational improvement for disabled participants.

EXHIBIT II – SUMMARY OF PLAN PROVISIONS

This exhibit summarizes the major provisions of the Plan included in the valuation. It is not intended to be, nor should it be interpreted as, a complete statement of all plan provisions.

Effective Date:	July 1, 1947.	
Creditable Service:	Service as a member plus purchased service.	
Average Final Compensation (AFC):	Average annual compensation during highest 3 consecutive years.	
Grandfathered Status:	Group C members who were within five years of normal retirement eligibility as defined prior to July 1, 2010, are “grandfathered”.	
Normal Retirement – Eligibility:	<ul style="list-style-type: none"> • Group A Age 60 or 30 years of creditable service. • Group C Grandfathered Age 62 or 30 years of creditable service Non-grandfathered Age 65 or age plus creditable service equal to 90. 	
Normal Retirement – Amount:	<ul style="list-style-type: none"> • Group A Member annuity based on accumulated contributions plus a pension, which, with member annuity, equals 1/60th of AFC times creditable service. • Group C Grandfathered Member annuity based on accumulated contributions plus a pension, which, with member annuity, equals 1/80th of AFC times creditable service prior to July 1, 1990, plus 1/60th of AFC times creditable service after July 1, 1990. Non-grandfathered Member annuity based on accumulated contributions plus a pension, which, with member annuity, equals 1/80th of AFC times creditable service prior to July 1, 1990, plus 1/60th of AFC times creditable service after July 1, 1990 up to 20 years of service, plus 1/50th of AFC for years of service after 20. <p style="margin-left: 40px;">If a member already has 20 or more years of service on June 30, 2010, the 1/50th will be applied to all service accrued after July 1, 2010.</p> <p>Minimum benefit applicable to Group A of \$6,600 after 30 years of creditable service (pro-rata for service less than 30 years).</p> <p>Maximum benefit applicable to Group C: Grandfathered maximum benefit is 50% of AFC up to June 30, 2010. May continue to accrue up to 53.34% of AFC with service earned after July 1, 2010. Non-grandfathered maximum benefit is 60% of AFC.</p>	
Early Retirement – Eligibility:	<ul style="list-style-type: none"> • Group A Age 55. • Group C Age 55 with 5 years of creditable service. 	

Early Retirement – Amount:	<ul style="list-style-type: none"> • Group A Actuarial equivalent of normal retirement allowance using AFC and creditable service at early retirement. • Group C Grandfathered Accrued normal benefit reduced 6% for each year prior to age 62. Non-grandfathered Accrued normal benefit reduced by actuarial reduction from normal retirement age.
Vesting:	<ul style="list-style-type: none"> • All groups – 5 years of creditable service. • Allowance beginning at age 60 calculated as a normal retirement allowance based on AFC and creditable service at termination.
Disability Retirement – Eligibility:	<ul style="list-style-type: none"> • All groups – Total and permanent disability after 5 years of creditable service (5 years preceding retirement served in State).
Disability Retirement – Amount:	<ul style="list-style-type: none"> • All groups – Calculated as a service allowance based on AFC and creditable service at disability retirement, subject to a 25% of AFC minimum.
Death Benefit – Eligibility:	<ul style="list-style-type: none"> • Group A Age 60 or 30 years of creditable service; 10 years of creditable service if in service at death. • Group C Age 55 and 5 years of creditable service or 10 years of creditable service.
Death Benefit – Amount:	<ul style="list-style-type: none"> • All groups – Accrued allowance paid under 100% survivorship option. If the eligibility requirements are not met or if beneficiary so elects, the member's accumulated contributions are paid to the beneficiary or estate. Certain children's benefits may also be payable.
Post-Retirement Adjustments:	<ul style="list-style-type: none"> • Group A Allowances in payment for at least one year increased on each January 1 by the percentage increase in Consumer Price Index, but not more than 5%. • Group C Same, but increase is based on half of the Consumer Price Index increase. For members receiving a reduced early retirement allowance, the adjustment will not apply before age 62.
Refund of Contributions:	If no other beneficiary is payable, a terminated member receives his accumulated contributions with interest.
Member Contribution Rates:	<ul style="list-style-type: none"> • Group A 5.5% of earnable compensation. Contributions stop after 25 years of creditable service. • Group C 5% of earnable compensation with at least five years of service as of July 1, 2014. 6% of earnable compensation with less than five years of service as of July 1, 2014.
Changes in Plan Provisions:	There have been no changes in plan provisions since the last valuation.

Section 5: Additional Summary Tables of Member Data

TABLE 1A – PARTICIPANTS IN ACTIVE SERVICE AS OF JUNE 30, 2017
BY AGE, YEARS OF CREDITABLE SERVICE, AND AVERAGE PAYROLL

All Employee Groups

Age	Years of Creditable Service								
	Total	0-4	5-9	10-14	15-19	20-24	25-29	30-34	35 & over
Under 25	149	149	--	--	--	--	--	--	--
	\$36,205	\$36,205	--	--	--	--	--	--	--
