# GARVEE Bonds: An Overview and Review of Their Feasibility for Vermont 

State Treasurer’s Office<br>March 2004

## Vermont's Highway Infrastructure is in Need of Capital Inflow

- Sustained financial commitment is necessary to provide for the long-term care of Vermont's highways.
- Pavement Resurfacing
- Replacement or rehabilitation of older bridges
- Expansion of highway capacity to relieve congestion
- Roadway improvements
- Vermont's transportation needs clearly exceed the ability of the state's traditional pay-as-you-go funding methods to support highway projects.

## Alternative Pavement Investment Scenarios

| Investment Scenario | Network Level | Funding (Per Year) | Percent Length in "Very Poor" Condition |  |
| :---: | :---: | :---: | :---: | :---: |
|  |  |  | Baseline | Projected 2011 |
| High (\$109 million/year) | Interstate | \$14 million | 1\% | 0\% |
|  | Non-Interstate Primary | \$35 million | 7\% | 5\% |
|  | Off-Primary | \$60 million | 23\% | 21\% |
| Medium (\$93 million/year) | Interstate | \$13 million | 1\% | 3\% |
|  | Non-Interstate Primary | \$30 million | 7\% | 7\% |
|  | Off-Primary | \$50 million | 23\% | 30\% |
| Low (\$63 million) | Interstate | \$13 million | 1\% | 3\% |
|  | Non-Interstate Primary | \$20 million | 7\% | 12\% |
|  | Off-Primary | \$30 million | 23\% | 55\% |
| Current (\$40 million) | Interstate | \$10 million | 1\% | 10\% |
|  | Non-Interstate Primary | \$15 million | 7\% | 25\% |
|  | Off-Primary | \$15 million | 23\% | 76\% |

## Amount needed to maintain current conditions for bridges and paving by FY 2011:

## \$152 Million Per Year

## Current level of funding:

## $\$ 58$ million

## At the same time, these critical needs are being "squeezed" by large capital projects <br> (equally important to Vermont's economic future).

## Largest Vermont Transportation Projects, Projected Remaining Costs as of July 1, 2004

Note: \$689 million remaining in costs for large dollar projects in planning or active stage in FY04 Source: JFO, updated data March 2004

## What Are GARVEEs?

-For many years, states, municipalities, and authorities have raised funds by issuing grant anticipation notes (GANs), which allow governmental entities to fund projects based on anticipated future revenues. GARVEEs (Grant Anticipation Revenue Vehicles) employ federal highway funds in the same way -- to repay the debt for road and transit projects.
-A GARVEE is a debt-financing instrument that permits the pledge of future federal highway funds to repay investors. A state may use future obligations of federal-aid funds to reimburse the retirement of principal and payment of interest, issuance, insurance, and associated other costs for the sale of an eligible debt-financing instrument.

## What Are GARVEEs?

- GARVEE bonds are loans pledged with a portion of future federal funds, sometimes backed by dedication of a portion of state fuel taxes.
- Their value is in greatly speeding up major projects. New Hampshire, Rhode Island, Mexico, Ohio, Massachusetts, Virginia, and many other states are actively using this option.

## How Are GARVEEs Regarded in the Bond Community?

-The Federal Highway Administration views GARVEE bonds as a safe approach for states, since federal funding for roads and bridges traditionally increases year to year.
-Investors see GARVEE bonds the same way, resulting in lower interest rates.

## Types of GARVEEs

Naked GARVEE - stands alone entirely on the future federal-aid reimbursement, not on the state's or any other entity's revenues or credit

Insured GARVEE - bond insurance has been purchased as a credit enhancement to make the bonds more marketable

Backstopped GARVEE - pledges another revenue source, such as the state's motor fuel tax, to enhance creditworthiness

Can be Direct or Indirect

## GARVEE Bonds Can Be Issued One of Two Ways:

- Direct GARVEE bonds, in which Federal assistance directly reimburses debt service paid to investors.
- Indirect GARVEE, in which Federal funds reimburse expenditures on other Federal-aid projects and the State subsequently uses a portion of those funds to pay debt service on the debt-financed project. The debt-financed project does not need to be a Federal-aid project.

## Direct GARVEEs

.Used to finance a specific project or projects
-State submits the debt service schedule for approval (this is called "programming")
-All proceeds need to be spent on the specific project or projects that were approved, leaving no spending discretion or flexibility
-State submits for reimbursement before each principal/interest payment, and State receives a reimbursement (three days) before the payment is actually made

## DIRECT GARVEEs

## GARVEE Debt Issuance Process:

-Identify federal-aid eligible project(s) on the State Transportation Improvement Program (STIP) to be financed.

- A GARVEE project is authorized in the same manner as any federal-aid project, except the state elects to seek payments for bond issuance costs (principal, interest, and related items) rather than construction invoice costs.
-Get approval for advance construction from FHWA division office, preserving the project's eligibility for future federal-aid assistance.
-Select method of matching - either up-front match based on state share of project cost, or match of each debt service payment over time. For the state portion, states also may choose to issue separate bonds, repaid solely with state funds.
-Issue debt and begin construction, following all relevant federal-aid requirements.
- Apply for partial conversion of advance construction as debt service comes due.
-FHWA division obligates funds for debt service and funds are wired directly to designated trustee.

## How Does the State Back the GARVEE?

-When the GARVEE is issued, the main form of security backing this debt-financing instrument is the state's obligation of future federal-aid apportionments. The state would designate an Advance Construction (AC) amount up-front, and subsequently obligate funds in each succeeding year in order to partially convert the designated AC amount. Each year, the issuer (state, state infrastructure bank, or other agency) would pay periodic debt service by receiving payments from FHWA for the Federal share of the expenditure.
-States may elect to pledge other sources of revenue in the event that future federal-aid highway funds are not available. This is called a "backstop" for the bonds.

## How is a Project Designated for GARVEE Financing?

- Once a project is selected for GARVEE financing and its costs are estimated, the project must be approved as an Advance Construction (AC) project by the FHWA.
- The AC designation preserves the project's future eligibility for Federal assistance. The amount of the AC designation should coincide with the Federal share (typically 80 percent) of the debt-related costs anticipated to be reimbursed during the life of the bonds. An upfront match, based on the State's share (typically 20 percent), is required.

## GARVEE Bonds vs. "Pay-as-You-Go"

-Until the late 1990s, most FHWA state aid took the form of reimbursing states on a "pay-as-you-go" basis for the federal share (generally 80 percent) of construction costs.
-State draws down obligated federal funds as monthly contractor invoice payments were presented during the construction period.
-State meets the typical 20 percent matching requirement from their state highway fund.
-As project sizes have grown, states have found it increasingly difficult to fund major capital investments using this method without displacing their smaller, ongoing improvement projects.
-Using bonds rather than a pay-as-you-go method, the interstate system will be under construction during a shorter period of time. Vermonters would be able to derive benefit from tax dollars sooner.
-Debt service on the bonds would not outlive the improvements.
-The bonds would be completely paid off long before the state would have to reconstruct those roads.
-Cash flow for state share would be tied to bond repayment, effectively increasing time frame and easing cash needs in the short-term.

## Advantages of GARVEEs

-Accelerated project delivery - GARVEE funding allows states to accumulate capital funding for a construction project in a lump sum rather than having to build up funding obligation over a great many years.
-Better funds management - There is the ability to "bundle" projects rather than funding individual construction projects and therefore stringing them out over many years.
-Reduced inflation of construction costs - Depending on the interest and economic climate, project acceleration can yield net savings, even after interest and other financing costs.
-Reallocating costs now will prevent further degradation of infrastructure.
-Economic development benefits - There may be economic, safety, and environmental benefits resulting from expedited completion of infrastructure projects.
-Reduced Use of GO Bonds - A state may be unwilling or unable to support a particular issue with its full faith and credit, as required with highly rated General Obligation (GO) bonds.

## GARVEE Issues to be Considered

-Are there specific projects that would benefit from the use of GARVEEs?
-How will GARVEE issuance affect Vermont's current highly favorable bond rating?
-Will rating agencies include GARVEE debt in their calculation of net tax-supported debt? How will this impact the State’s longterm debt strategy.
-Are GARVEEs cost-effective for the projects in the current economic climate?

## Considerations for GARVEES

## Are there specific projects that would benefit from the use of GARVEEs?

-Preliminary review suggest several large projects that could be eligible, freeing up funds for maintenance. Additional review of specific projects, time lines, and underlying cash flows is needed.

| All figures current \$ millions <br> Project | Remaining Cost* |  |
| :---: | :---: | :---: |
|  | Active Projects | $\begin{gathered} \hline \text { Planning } \\ \text { stage } \\ \hline \end{gathered}$ |
| Circumferential Highway |  |  |
| Segments A\&B | 46.8 |  |
| Segments GH |  | 41.5 |
| Segments I,J |  | 23.1 |
| Total |  | 64.6 |
| Bennington Bypass |  |  |
| North |  | 99.4 |
| South |  | 45.7 |
| West | 7.6 |  |
| Total |  | 145.1 |
| Shelburne-South Burlington Route 7 | 26.8 |  |
| Missisquoi Bay Bridge | 22.5 |  |
| Morristown | 13.3 |  |
| Pittsford-Brandon | 51.1 |  |
| Cabot-Danville | 10.9 |  |
| Champlain Parkway | 19.6 |  |
| Route 4 Improvements |  | 94.6 |
| Route 15 Corridor Plan |  | 22.0 |
| ABRB Rail Corridor |  | 49.0 |
| Burlington Rail Yard |  | 74.0 |
| Rutland Rail Yard |  | 59.0 |
| Total | 198.6 | 508.4 |

## Considerations for GARVEES

## How will GARVEE issuance affect Vermont's current highly favorable bond rating?

-Preliminary indications are that, in absence of other negative factors (budgetary, revenue, pension funding, etc.), GARVEE issuance is unlikely to result in a rating reduction.

## Considerations for GARVEES

## Will rating agencies include GARVEE debt in their calculation of net tax-supported debt? How will this impact the State's long-term debt strategy?

-Preliminary indications are that this will be added to the State's debt calculations in two of the three major credit rating agencies. A third agency will generally exclude GARVEE issuance from net taxsupported debt calculations if the GARVEE is not backed by state resources. In such cases, the issuance of GARVEE bonds would, however, be disclosed in rating summaries provided by the rating agency.

## Considerations for GARVEES

Are GARVEEs cost-effective for the projects in the current economic climate?

## The analyses included in this presentation are hypothetical models for illustrative purposes.

- Prior to any final analysis of projected cost/savings additional, research will be required.
- Factors affecting analyses include:
- Length of time it would take to complete projects without acceleration of funding through GARVEES;
- Interest rate on re-invested bond proceeds;
- Actual interest rate on bonds;
- Rate of inflation for construction costs.

## Assumptions Used in Hypothetical Models

- Interest Rate for Reinvested Bond Proceeds:
- 1.67\%
- Source: average two-year treasury rate as of end of February 2004.
- Inflation Rate:
- 3\%
- Source: McGraw-Hill Index, Heavy Construction Inflation Rate
- Bond Maturities: Both 8 and 12-year maturities for bonds are simulated. Bonds are presumed issued in \$50 million increments in 2005 and 2008.
- Various models herein assume 8 and 10-year cycles to complete projects in the absence of GARVEE bonds.

## $\underline{\text { Scenarios Tested }}$

- Scenario 1: No Debt Issued. Assumes normal distribution of funds, incremental increase in second round of six-year funding. THIS IS THE BENCHMARK FOR COMPARATIVE PURPOSES.
- Scenario 2: Issue GARVEE bonds in two issues of $\$ 50$ million each, 12-year maturities.
- 2A: assumes it would take eight years to complete project in absence of GARVEES
- 2B: assumes it would take ten years to complete project in absence of GARVEES
- Scenario 3: Issue GARVEE bonds in two issues of $\$ 50$ million, 8-year maturities (less debt service costs).
- 3A: assumes it would take eight years to complete project in absence of GARVEES
- 3B: assumes it would take ten years to complete project in absence of GARVEES

## Assumed Interest Rates on GARVEE Bonds

- 12-Year Bonds: Assumes true interest cost (TIC) of 3.028\% and 3.247\% for bonds (based on market conditions as of 2/25/04).
- 8-Year Bonds: Assumes true interest cost (TIC) of 2.452\% and $2.649 \%$ for bonds (based on market conditions as of 2/25/04).

## The Benchmark:

Scenario 1 - No Debt Issued

| Year | Federal Funds |
| :---: | ---: |
| 2004 | $\$ 101,000,000$ |
| 2005 | $101,000,000$ |
| 2006 | $101,000,000$ |
| 2007 | $101,000,000$ |
| 2008 | $101,000,000$ |
| 2009 | $101,000,000$ |
| 2010 | $101,000,000$ |
| 2011 | $106,000,000$ |
| 2012 | $106,000,000$ |
| 2013 | $106,000,000$ |
| 2014 | $106,000,000$ |
| 2015 | $106,000,000$ |
| 2016 | $106,000,000$ |
| 2017 | $106,000,000$ |
| 2018 | $106,000,000$ |
| 2019 | $106,000,000$ |
| 2020 | $106,000,000$ |
|  |  |
| Total | $\$ 1,767,000,000$ |

This is a hypothetical benchmark and there is no assumption made as to Vermont's federal transportation aid reimbursement

## Summary of Test Models:

|  |  | Total Funds Net For Cash Flow |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Year | Federal Funds (Scenario 1 Benchmark) | Scenario 2A | Scenario 2B | Scenario 3A | Scenario 3B |
| 2004 | \$101,000,000 | \$101,000,000 | \$101,000,000 | \$101,000,000 | \$101,000,000 |
| 2005 | 101,000,000 | 151,000,000 | 151,000,000 | 151,000,000 | 151,000,000 |
| 2006 | 101,000,000 | 96,769,204 | 96,743,141 | 94,819,019 | 94,792,957 |
| 2007 | 101,000,000 | 96,842,513 | 96,748,323 | 94,887,189 | 94,792,998 |
| 2008 | 101,000,000 | 146,900,071 | 146,739,693 | 144,950,075 | 144,789,696 |
| 2009 | 101,000,000 | 93,720,911 | 93,496,186 | 91,199,941 | 90,975,216 |
| 2010 | 101,000,000 | 93,760,864 | 93,473,798 | 91,245,703 | 90,958,637 |
| 2011 | 106,000,000 | 98,791,489 | 98,443,897 | 96,277,070 | 95,929,479 |
| 2012 | 106,000,000 | 98,922,933 | 98,516,540 | 96,403,771 | 95,997,378 |
| 2013 | 106,000,000 | 99,213,078 | 98,749,518 | 96,695,012 | 96,231,453 |
| 2014 | 106,000,000 | 97,476,127 | 98,978,233 | 94,960,057 | 96,462,163 |
| 2015 | 106,000,000 | 96,838,668 | 99,201,124 | 94,321,716 | 96,684,172 |
| 2016 | 106,000,000 | 96,840,967 | 97,465,422 | 94,320,416 | 94,944,871 |
| 2017 | 106,000,000 | 96,840,025 | 96,840,025 | 106,000,000 | 106,000,000 |
| 2018 | 106,000,000 | 96,839,879 | 96,839,879 | 106,000,000 | 106,000,000 |
| 2019 | 106,000,000 | 96,841,204 | 96,841,204 | 106,000,000 | 106,000,000 |
| 2020 | 106,000,000 | 96839872 | 96,839,872 | 106,000,000 | 106,000,000 |
| Total | \$1,767,000,000 | \$1,755,437,804 | \$1,757,916,854 | \$1,766,079,969 | \$1,768,559,019 |
| Variance |  | \$11,562,196 | \$9,083,146 | \$920,031 | -\$1,559,019 |

Depending on scenario utilized, use of GARVEES could cost (after factoring in debt service, inflation, and investment of bond proceeds) $\$ 11,562,196$ over a 16-year period, or save $\$ 1,599,019$ with a range of potential scenarios close to zero fiscal impact. Economic gains from improved highways are not included in the analysis.

## Scenario 2: \$100 Million in Debt Over 12 Years

- Assumes two issues of $\$ 50$ million each
- In 2005 and 2008
- Assumes true interest cost (TIC) of 3.028\% and 3.247\% for bonds (based on current market conditions as of 2/25/04)
- Assumes proceeds reinvested at $1.67 \%$ (current two-year treasury rate)
- Assumes that inflation for construction costs is 3\% (the current McGraw-Hill Inflation Index, Heavy Construction)

Scenario 2A: Two GARVEE Bond Issues (2005, 2008), 12-Year Maturities
vs. Project Completion Over an 8-Year Period

| Year | Federal Funds <br> (Scenario 1 <br> Benchmark) | Total Funds Net <br> Debt Service | Add Back <br> Investment <br> Proceeds | Present <br> Value <br> Savings | Total Funds Net <br> for Cash Flow |
| :---: | ---: | ---: | ---: | ---: | ---: |
| 2004 | $\$ 101,000,000$ | $\$ 101,000,000$ |  |  | $\$ 101,000,000$ |
| 2005 | $101,000,000$ | $151,000,000$ |  |  | $\$ 151,000,000$ |
| 2006 | $101,000,000$ | $95,905,007$ | 730,625 | 133,572 | $\$ 96,769,204$ |
| 2007 | $101,000,000$ | $95,907,495$ | 452,292 | 482,727 | $\$ 96,842,513$ |
| 2008 | $101,000,000$ | $145,904,175$ | 173,958 | 821,938 | $\$ 146,900,071$ |
| 2009 | $101,000,000$ | $91,838,574$ | 730,625 | $1,151,712$ | $\$ 93,720,911$ |
| 2010 | $101,000,000$ | $91,837,360$ | 452,292 | $1,471,212$ | $\$ 93,760,864$ |
| 2011 | $106,000,000$ | $96,836,124$ | 173,958 | $1,781,406$ | $\$ 98,791,489$ |
| 2012 | $106,000,000$ | $96,840,167$ |  | $2,082,767$ | $\$ 98,922,933$ |
| 2013 | $106,000,000$ | $96,837,335$ |  | $2,375,743$ | $\$ 99,213,078$ |
| 2014 | $106,000,000$ | $96,837,586$ |  | 638,541 | $\$ 97,476,127$ |
| 2015 | $106,000,000$ | $96,838,668$ |  |  | $\$ 96,838,668$ |
| 2016 | $106,000,000$ | $96,840,967$ |  |  | $\$ 96,840,967$ |
| 2017 | $106,000,000$ | $96,840,025$ |  |  | $\$ 96,840,025$ |
| 2018 | $106,000,000$ | $96,839,879$ |  |  | $\$ 96,839,879$ |
| 2019 | $106,000,000$ | $96,841,204$ |  |  | $\$ 96,841,204$ |
| 2020 | $106,000,000$ | $96,839,872$ |  | $\$ 96,839,872$ |  |
|  |  |  |  |  |  |
| Total | $\$ 1,767,000,000$ | $\$ 1,741,784,436$ | $\$ 2,713,750$ | $\$ 10,939,619$ | $\$ 1,755,437,804$ |
| Variance |  | $\$ 25,215,565$ |  |  | $\$ 11,562,196$ |

Scenario 2B: Two GARVEE Bond Issues (2005, 2008), 12-Year Maturities
vs. Project Completion Over a 10-Year Period

| Year | Federal Funds (Scenario 1 Benchmark) | Total Funds Net Debt Service | Add Back Investment Proceeds | Present Value Savings | Total Funds Net for Cash Flow |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 2004 | \$101,000,000 | \$101,000,000 |  |  | \$101,000,000 |
| 2005 | 101,000,000 | 151,000,000 |  |  | \$151,000,000 |
| 2006 | 101,000,000 | 95,905,007 | 730,625 | 107,510 | \$96,743,141 |
| 2007 | 101,000,000 | 95,907,495 | 452,292 | 388,536 | \$96,748,323 |
| 2008 | 101,000,000 | 145,904,175 | 173,958 | 661,560 | \$146,739,693 |
| 2009 | 101,000,000 | 91,838,574 | 730,625 | 926,988 | \$93,496,186 |
| 2010 | 101,000,000 | 91,837,360 | 452,292 | 1,184,146 | \$93,473,798 |
| 2011 | 106,000,000 | 96,836,124 | 173,958 | 1,433,815 | \$98,443,897 |
| 2012 | 106,000,000 | 96,840,167 |  | 1,676,373 | \$98,516,540 |

## Scenario 3: \$100 Million in Debt Over 8 Years

- Assumes two issues of $\$ 50$ million each
- In 2005 and 2008
- Assumes true interest cost (TIC) of 2.452\% and 2.649\% for bonds (based on current market conditions as of 2/25/04)
- Assumes proceeds reinvested at $1.67 \%$ (current two-year treasury rate)
- Assumes that inflation for construction costs is 3\% (the current McGraw-Hill Inflation Index, Heavy Construction)

Scenario 3A: Two GARVEE Bond Issues (2005, 2008), 8-Year Maturities
vs. Project Completion Over an 8-Year Period

| Year | Federal Funds <br> (Scenario 1 <br> Benchmark) | Total Funds Net <br> Debt Service | Add Back <br> Investment <br> Proceeds | Present Value <br> Savings | Total Funds Net for <br> Cash Flow |

## Summary

- Any final analysis of cost/benefits of GARVEEs will require additional modeling based on actual projects and timelines.
- GARVEE bonds can, however, be structured in a way that reduces the cost of debt service, minimizing costs.
- The cost of debt service can, depending on economic conditions, be more than offset by the re-investment of bond proceeds and inflationary savings.
- Economic benefits from improved highways will likely accrue earlier because of faster completion of projects.

## Considerations on Limits to GARVEE Issuance

- Long-term commitments for repayment can lessen a transportation department's ability to meet a state's changing transportation needs.
- Dependability of future federal appropriations.
- Some states limit level of use:
- Example: California -- The Treasurer may not authorize the issuance of the notes if the annual debt service on all outstanding GARVEE notes would exceed 30 percent of the State's historical annual deposits in the State Highway Account from federal funding.
- Alternative: Limit GARVEE issuance to incremental increase in federal aid above a base year (2004).
- Does not impact current plans to use existing aid.

## Treasurer's Recommendation

-Develop a carefully crafted and conservative GARVEE bonding program to fund a number of major outstanding projects.
-Assemble a Working Group to develop the program, including:
-Secretary of Administration
-Secretary of Transportation

- State Treasurer
-Chairs of the Transportation Committees
-Governor's designee to the Capital Debt Affordability Advisory Committee
-Treasurer to conduct an RFP to select an investment banker/underwriter who, along with the current Financial Advisor, will assist in development of the proposal and, contingent upon approval, executing the proposal in the market.
-Prepare proposal and necessary authorizing language for presentation to the General Assembly.
