# PERFORMANCE OVERVIEW

## Q3 Market Summary

Macro			Equity			Credit			Real Assets		
US Dollar	VIX	US 10-Yr	S&P 500	MSCI EAFE	MSCI EM	US Agg.	High Yield	Dollar EMD	Oil	Gold	REITS
											
0.7%	-4.0	20 bps	7.7%	1.4%	-1.1%	0.0%	2.4%	1.9%	-1.2%	-4.8%	0.7%

- **US equities increased during the quarter, supported by strong macroeconomic data and a tight labor market**
- **Emerging market equities broadly declined with ongoing currency weakness and trade tensions weighing on sentiment**
- **The Federal Reserve hiked rates for the third time this year and is expected to hike rates again in December**

Market segment (index representation) as follows: US Dollar (DXY Index), VIX (CBOE Volatility Index), US 10-Year (US 10-Year Treasury Yield), S&P 500 (US Equity), MSCI EAFE Index (International Developed Equity), MSCI Emerging Markets (Emerging Markets Equity), US Agg (Barclays US Aggregate Bond Index), High Yield (Barclays US High Yield Index), Dollar EMD (JPM Emerging Market Bond Index), Crude Oil (WTI Crude Oil Spot), Gold (Gold Price Spot), and REITs (NAREIT Composite Index).

# INVESTMENT MANAGER – Q1 FISCAL 2019 COMMENTARY – POSITIVE CONTRIBUTORS

	Commentary	Due Diligence Rating
<b>Champlain</b> <i>Small/Mid Cap Equity</i>	<p><b>Returned 7.2%, outperforming the custom benchmark, 50% R2000/50% R2500, by 330bps</b></p> <p><i>Contributors:</i> The overweight and stock selection in health care holdings meaningfully outperformed the benchmark for the quarter and year to date. Gains in Veeva, Bio-Techne, and NuVasive led the quarter. Stock selection in technology and overweight in software accounted for the majority of the outperformance for the sector. Cloud computing holdings have gained with the fundamentals reflecting growth as customer adoption increases. Within industrials, last quarters largest detractor, John Bean Tech (JBT) was this quarters strongest contributor as the company's quarterly results confirmed any weakness in first quarter was a one time event. Strong stock selection in Consumer Discretionary as Tractor Supply and Ulta Beauty holdings were back in favor.</p> <p><i>Detractors:</i> Overweight and stock selection in Consumer Staples as Campbell Soup owner, Third Point suggests changes to the Campbell Soup recipe. No exposure to Utilities as this sector performed well in the third quarter.</p> <p><i>Positioning:</i> Trimmed consumer holdings that have appreciated as investors have sought safe harbor. Added to industrial holdings that have been sold off as investors anticipate the next recession. Taking advantage of the decline in the technology sector to add selectively to the cloud-based software holdings. While valuations alone warrant selective adds in the software industry, IBM's intention to acquire Red Hat, Inc. (RHT) will create a meaningful return of capital; and they want to redeploy at least some of that capital back into the industry as opportunities present themselves.</p>	1
<b>Mondrian</b> <i>International Equity</i>	<p><b>Returned 2.3%, outperforming the MSCI EAFE by 70bps</b></p> <p><i>Contributors:</i> Stock selection in Asia Pacific was the driver of positive relative returns, in particular, the position in Fujifilm, CK Hutchinson, and China Mobile. There has been some speculation that the company's two rivals could be combined to accelerate the commercialization of 5G. TSMC, a Taiwanese semiconductor manufacturer, also generated strong returns after a US competitor halted nanometer chip development, reinforcing TSMC's leadership in this space. Overweight in telecom and energy sectors as earnings mostly exceeded expectations and oil prices rose as demand was robust and supply tightened. Underweight in the weak real estate, which declined following a rise in bond yields. Underweight Japanese Yen and Australian dollar.</p> <p><i>Detractors:</i> In the context of Brexit-related uncertainty, the portfolio's positions in domestically-oriented UK stocks detracted. They have added to exposures to take advantage of attractive valuations. Underweight position in Japan detracted as the equity market was supported by yen weakness. Overweight position in Italy as plans from the new Italian government to raise public spending created uncertainty. They have taken the opportunity to add to positions in selected European banks where recent share price weakness led to attractive valuations. Underweight in Swiss frank also detracted.</p>	1

# INVESTMENT MANAGER – Q1 FISCAL 2019 COMMENTARY – POSITIVE CONTRIBUTORS

	Commentary	Due Diligence Rating
<p><b>Aberdeen</b> Emerging Market Equity</p>	<p><b>Returned -0.50%, outperforming the MSCI Emerging Markets by 60bps</b></p> <p><i>Contributors:</i> Asset allocation and stock selection contributed to returns. The light positioning in China proved beneficial as the market sold off on concerns over Beijing's trade concerns with the US. Holdings in Indonesia with Indocement and Astra International rebounded from previous weakness. Mexico's recovery benefited their holdings, particularly the airport operator, Asur, and the banking and financial services provider, Banorte. Lack of exposure to Alibaba, which fell more than 11% over the quarter, had benefited relative to the benchmark.</p> <p><i>Detractors:</i> Negative stock selection in India as there were signs of distress in the financial sector. Specifically, the Indian lender, Kotak Mahindra Bank, on concerns over the default by the non-banking financial company IL&amp;FS. Underweight to energy as oil prices continued to rally.</p> <p><i>Positioning:</i> Remain underweight in China, where companies fall short on quality and corporate governance. Underweight in Taiwan as the export-oriented economy has a market that offers a narrow selection of companies, the bulk in the tech sector. Underweight in Korea as the well-known brands such as Samsung and Hyundai dominate and can make the business landscape less competitive. Overweight in Hong Kong as it offers companies that have diversified businesses and added advantage of better standards over China. Overweight India as the market has many high-quality companies and the economic growth rate is among the best in Asia. Overweight Brazil as the economy offers a deep market of quality companies at attractive valuations.</p>	<p><b>2</b> Rating Changed from "1" to "2" in January 2018</p>
<p><b>PIMCO</b> Core Plus Fixed-Income</p>	<p><b>Returned 0.20%, outperforming the Barclays Aggregate Bond Index by 20bps</b></p> <p><i>Contributors:</i> Contributions from interest rate strategies more than offset detractions from currency and spread sector strategies. Developed market interest rate strategies, particularly country selection in Europe. Positions in non-Agency MBS. Local rate exposure in Brazil.</p> <p><i>Detractors:</i> Underweight investment-grade corporate credit. Tactical exposure to select high carry EM currencies. Positions in Agency MBS.</p> <p><i>Positioning:</i> Underweight duration overall and have a preference for US duration over other developed regions. The intermediate portion of the curve offers more attractive characteristics while longer term rates may rise as the Fed continues to reduce accommodation. Attractive opportunities in credits that benefit from US growth and the housing sector, specifically banks and select financial companies. Tactical with currency positioning, particularly given less conviction in the overall direction of the dollar. Select high carry EM FX may be attractive as diversifying risk exposure.</p>	<p><b>1</b></p>

Returns presented are net of investment management fees

# INVESTMENT MANAGER – Q1 FISCAL 2019 COMMENTARY – POSITIVE CONTRIBUTORS

	Commentary	Due Diligence Rating
<p><b>Pinnacle Natural Resources (PNR)</b> <i>Absolute Return</i></p>	<p><b>Returned 1.2%, outperforming the Bloomberg Commodity Index by 320bps</b></p> <p><i>Contributors:</i> Exposure to European strategies contributed the most to performance, driven by positions in power, gas, coal, and carbon markets. Exposure to U.S. natural gas markets with higher prices, driven by low U.S. gas stockpiles, warm-weather related demand, and nuclear power plant outages. PNR's exposure to precious metals and platinum group metals (PGMs) contributed to the portfolio. With the exception of palladium, the precious metals market was lower in the quarter.</p> <p><i>Detractors:</i> Exposure to oil markets detracted the most from the Fund's performance. Modest losses were also seen in base metals and agricultural/meats exposure. PNR experienced losses in the grains complex. In Q3, abundant supplies, a stronger U.S. Dollar, and the ongoing talks of tariffs and retaliatory measures between the U.S. and China continued to weigh on the agricultural sector. Industrial metals detracted as they were weaker on global trade uncertainty with the U.S.-China trade dispute weighing on the demand outlook.</p> <p><i>Positioning:</i> As of end of the quarter, gross and net exposure were 6.8X and 1.5X, respectively. Exposure to FX/Rates/Index detracted from performance. As of October 1, 2018, PNR had a total of 17 active underlying investments. The Fund redeemed a natural gas focused managed account and added an investment to a physical natural gas and power company.</p>	<p><b>1</b></p>

# INVESTMENT MANAGER – Q1 FISCAL 2019 COMMENTARY – POSITIVE CONTRIBUTORS

	Commentary	Due Diligence Rating
<b>Grosvenor</b> <i>Absolute Return</i>	<p><b>Returned 0.6%, outperforming the HFRI Fund of Funds Composite Index by 40 bps</b></p> <p><i>Contributors:</i> The Fund’s macro, relative value, and credit strategies were notable positive drivers of returns, with modest additional contribution from its multi-strategy and quantitative allocations. A positive multi-strategy performer included a diversified relative value manager which invests primarily in fixed income securities that was energy-heavy benefited. Positive outliers in the Fund’s equity strategy included investments with a European-focused, small- and midcap equity activist, a long-biased healthcare/biotechnology sector specialist, and a pair of core, market-neutral equity investors. The Fund’s dedicated emerging markets debt allocation and an event-driven, long-biased credit fund were also accretive to returns.</p> <p><i>Detractors:</i> The equity strategy component was a minor detractor, and was marked by significant dispersion at the underlying fund level. Material detractors in the third quarter were a China-focused low-net specialist, a long-biased U.S. financials specialist, and a Europe-oriented event-driven manager. Negative performers included the Fund’s dedicated long-volatility investments and an Asia-focused discretionary macro investor.</p> <p><i>Positioning:</i> Based on their cautious view, they have a ‘barbelled’ investment approach, emphasizing lower sensitivity to broader markets. Global volatility and geopolitical turmoil have begun to provide opportunities into which they are deploying capital, seeking to take advantage of expected future dislocation. An example of such an investment is with a macro hedge fund which aims to hedge against mispriced Italian risk premia, as well as other European assets which may face contagion risk stemming from ongoing political turmoil in Italy.</p>	1
<b>Allianz</b> <b>Structured Alpha 500</b> <i>Absolute Return</i>	<p><b>Returned 2.0%, outperforming the 91 Day T-Bills by 150bps</b></p> <p><i>Contributors:</i> The benign environment enabled a hold to all of their range-bound spreads to expiration, with no restructuring of any portfolio positions. In the quarter they were able to capitalize on the S&amp;P 500 index’s ascent by realizing substantial gains on upside directional spreads. These gains, combined with some positive mark-to-market recovery at the beginning of July, enabled the portfolio to perform ahead of target despite a low quarterly average VIX level of 13.</p> <p><i>Detractors:</i> A rising market can dampen return potential as it keeps implied volatility levels down.</p> <p><i>Positioning:</i> With a 2-point increase in the year-over-year average VIX (from 11 to 13), they were able to build range-bound spread profit zones approximately 1.5% wider, allowing for more statistical safety in the event of an equity-market decline.</p>	1

# INVESTMENT MANAGER – Q1 FISCAL 2019 COMMENTARY – **DETRACTORS**

	Commentary	Due Diligence Rating
<p><b>GAM</b> <b>Unconstrained</b> <i>Unconstrained</i> <i>Fixed Income</i></p>	<p><b><u>Liquidation Update</u></b></p> <p>NEPC has been conducting bi-weekly update calls with GAM to receive updates on the orderly liquidation of the Unconstrained Bond Fund. GAM has made significant progress liquidating the Fund's holdings, including many of the Fund's illiquid positions, and to date has distributed approximately 66% of the total fund value. The firm has indicated that they intend to make another distribution in late November or early December following the settlement of a sale transaction of one of the illiquid holdings. The firm has continued to liquidate security positions and close out derivative contracts used for hedging throughout October.</p> <p>The largest illiquid positions remaining in the portfolio are the Liberty Industries PPA (Power Purchase Agreement) bonds. GAM has indicated that the renewable energy certification tied to the bonds' underlying assets has progressed as planned and they believe that the completion of this process later this year will enable the issuer to refinance the bonds at more favorable rates, which will enable GAM to exit the position at or near the current price sometime in December or January 2019. Because the Liberty Industries bonds are denominated in Pound Sterling (GBP), GAM has left a GBP to US Dollar (USD) currency hedge in place to prevent currency losses on the position. As part of NEPC's ongoing monitoring of the liquidation we have contacted the GAM Fund's third-party valuation vendor, State Street Bank, to confirm that contract and pricing policies related to the Fund conform with industry standards and that there have been no conflicts between the valuations provided by State Street and GAM's internal pricing of the Fund holdings.</p> <p>GAM disclosed updated information on the firm's assets-under-management as part of its 3rd quarter earnings announcement. The firm has seen the total assets managed by its investment management business drop from approximately \$85 billion to \$67 billion during the third quarter, while the assets in its other units have been more stable. On November 6th GAM further disclosed that its Chief Executive, Alexander Friedman, would be leaving the firm and would be replaced on an interim basis by David Jacob, a non-executive Director on the firm's Advisory Board. Mr. Jacob has significant asset management experience, having most recently served as CEO of Rogge Global Partners. Given Mr. Friedman's role overseeing the portfolio management team that managed the Unconstrained Bond Fund his departure was not unexpected.</p> <p>GAM has delivered market value statements for October, reporting a positive return of 0.63% during a volatile month for stocks and bonds. NEPC is awaiting updated holdings as of October 31st and will continue to report any further developments as information becomes available.</p>	<p><b>Terminate</b> Rating changed from "1" to terminate in August 2018</p>

# INVESTMENT MANAGER – Q1 FISCAL 2019 COMMENTARY – **DETRACTORS**

	Commentary	Due Diligence Rating
<b>Acadian</b> <i>International Equity</i>	<p><b>Returned 1.0%, underperforming the MSCI EAFE by 40bps</b></p> <p><i>Detractors:</i> Small-cap tilt was a headwind in most markets. The underperformance of small caps was most acute in the U.S. A modest exposure to volatility also detracted. Exposure to Turkey adversely impacted their emerging market portion of their strategy. Holdings such as Tencent, Alibaba, and Naspers lagged.</p> <p><i>Contributors:</i> Positive stock selection across most market segments. Growth and momentum continued to deliver strong payoffs. Quality remains positive especially within small-caps. Value offered some support as payoffs to price to intrinsic asset value turned positive in July. More nuanced factors such as short interest and peer momentum also added value highlighting the strength of both traditional and proprietary factors. Factor returns did vary somewhat across regions. Value was particularly strong in emerging markets as previous leaders with elevated valuations such as</p> <p><i>Positioning:</i> Positive on healthcare, energy, and software, driven by positive momentum, whereas automobiles, real estate, and utilities are viewed negatively. Italy and Canada, where valuations remain attractive, are viewed as strongly positive. Portugal leads their ranking supported by valuations and an additional boost from quality. Russia remains at the top of their standings supported by strong value scores. Other top countries include Israel, Austria, and Japan. UK, Ireland, and Belgium, have less encouraging outlooks. Hong Kong remains as a bottom scored country.</p>	<p><b>1</b></p>

# INVESTMENT MANAGER – Q1 FISCAL 2019 COMMENTARY – **DETRACTORS**

	Commentary	Due Diligence Rating
<p><b>PIMCO</b> <i>Unconstrained Fixed Income</i></p>	<p><b>Returned 0.9%, trailing the 3-Month Libor benchmark by 20bps</b></p> <p><i>Contributors:</i> Country selection in the eurozone, short exposure to Japanese and UK interest rates, as well as interest rate strategies in Argentina and Brazil all contributed to performance. Exposure to investment-grade and high yield corporate credits contributed to performance as spreads continued to tighten. Non-Agency mortgage-backed security selection and sector exposure benefitted. Exposure to USD-denominated emerging market debt contributed to performance as the asset class posted positive returns in the quarter.</p> <p><i>Detractors:</i> Exposure to U.S. interest rates detracted as yields rose across the curve in quarter. Exposure to high carry emerging market currencies, primarily the Argentina peso and Turkish lira, detracted from performance as those currencies continued to depreciate despite positive policy developments towards the end of the quarter.</p> <p><i>Positioning:</i> Retain a defensive position on duration with a focus of relative value. See value in being long US duration while remaining short duration in Japan, UK, and the Eurozone. Selectively investing in corporate credit with a focus on high quality positions. Favor long positions in higher yield EM currencies, such as the Russian ruble, Argentine peso, and Turkish lira, versus lower yielding Asian currencies such as Taiwanese and Singapore dollars. Favor US dollar versus developed market currencies as well.</p>	<p>1</p>

# INVESTMENT MANAGER – Q1 FISCAL 2019 COMMENTARY – **DETRACTORS**

	Commentary	Due Diligence Rating
Hosking Global Equity	<p><b>Returned 1.6%, underperforming the MSCI ACWI Index by 270 bps.</b></p> <p><i>Detractors:</i> The portfolio's largest overweight sectors have been financials, materials and consumer discretionary, all of which underperformed in the quarter. The underweight to technology stocks, particularly not owning Apple, was a strong drag as was the overweight to emerging markets, notably Russia. Underperformance experienced so far this year is driven by their two largest overweight areas – financials and emerging markets. Underweight North America and overweight Europe 6% detracted.</p> <p><i>Contributors:</i> Amazon was the largest positive contributor. Not owning Facebook, holdings in Belmond, MBK, Delta Air Lines, Motor Oil, not owning Tencent and the holding in TSMC, all benefited. Following a challenging run, some of the long-held positions to US airlines, including Delta and American, were also positives.</p> <p><i>Positioning:</i> The portfolio saw historically low turnover with purchases reflecting a continuation towards areas of the market that remain out of favor. The Amazon position continued to be trimmed. The case for financials remain as banks have expanding net interest margins and have been cost cutting, helping book value per share growth exceed the US stock market. With US shares looking relatively expensive, Emerging Markets continues to remain a better place as inflation rates, current account deficits, and debt coverage ratios are well-contained and most currencies are floating.</p>	1
Artisan Global Equity	<p><b>Returned 3.5%, underperforming the MSCI ACWI Index by 80 bps</b></p> <p><i>Contributors:</i> Though positive on an absolute basis, our portfolio trailed the MSCI AC World in the quarter. Relative weakness was concentrated among our energy and consumer discretionary holdings.</p> <p><i>Detractors:</i> Our health care, technology and communication services holdings were beneficial in the quarter.</p> <p><i>Positioning:</i> Despite rising uncertainty, there remain interesting investing opportunities globally—with many trading at valuations that still look reasonable to us given the opportunity ahead of them. Regardless of the direction markets take in the coming quarters, we will adhere to our disciplined approach, which over the course of our team's history, has proved sufficiently resilient to withstand a variety of investing environments.</p>	1

# INVESTMENT MANAGER – Q1 FISCAL 2019 COMMENTARY – **DETRACTORS**

	Commentary	Due Diligence Rating
<p><b>Wellington Opportunistic Emerging Market Debt</b></p>	<p><b>Returned 1.8%, underperforming the JP Morgan EMBI Global Index by 10 bps</b></p> <p><i><u>Detractors:</u></i> Negative security selection in Argentina, specifically an allocation to EUR-denominated sovereign debt. An allocation to local rates in Russia, due to an undervalued and moderate economic recovery with inflation closer to target but manageable, weighed on results. A lack of exposure to Pakistan hurt results. They are cautious on Pakistan due to negative fundamental trends, including declining reserves due to a dependency on external financing, weak fiscal performance due to low revenue collection, and a widening current account deficit due to excessive reliance on oil prices. Negative security selection in Romania, specifically an allocation to EUR-denominated sovereign debt, detracted from results. A slight overweight country allocation to Zambia, due to attractive valuations, hurt performance.</p> <p><i><u>Contributors:</u></i> Overweight Azerbaijan given attractive valuations and expected credit quality improvement on the back of fiscal, banking, and current account consolidation. Overweight Sri Lanka due to the reform momentum supported by an IMF. Overweight Senegal given the govt's continuous commitment to the IMF program and to fiscal consolidation. Underweight Turkey and remain cautious given the country's low savings rate, its large current account deficit, which limits its growth potential and is structurally negative, and a shortage of reserves that leaves the central bank exposed to external shocks.</p> <p><i><u>Positioning:</u></i> Risk posture shifted to neutral - balancing improved EM fundamentals and attractive valuations against tightening global liquidity, trade protectionism risks and select EM country struggles. Favor select frontier markets with strong reform stories and/or IMF, commodity price support. Favor Gulf Cooperation Council (GCC) countries with reform momentum and attractive valuations relative to credit quality. Favor Central and Eastern European countries with improving fundamentals not recognized by markets. Underweight investment grade countries in Latin America where valuations are tight. Underweight much of Asia due to tight valuations. Favor issuers in Eastern Europe and the Middle East over Asia and Latin America. Positive on Russia and cautious on Turkey, Brazil, and Mexico. Constructive on Argentina. Favor currency in Mexico Peso, Peruvian sol, Czech koruna, Polish zloty, S. African rand and Turkish lira.</p>	<p><b>1</b></p>

Note: Plan attribution calculations are returns based and the results shown reflect the composites shown. As a result, the total returns shown may vary from the calculated returns shown on the performance report

The target return shown for each composite is a custom index, based on aggregated policy indices. This policyindex asset weights the underlying policy indices of each option in the plan and the respective benchmark

The allocation, selection, and interaction effects are calculated using the custom index described above alongwith the policy or target weight of each composite

May not add up due to rounding

Absolute Return's Wtd. index Return is calculated using a weighting of the respective benchmarks for each underlying strategy part of the composite

# **ANALYTICS DEFINITIONS**

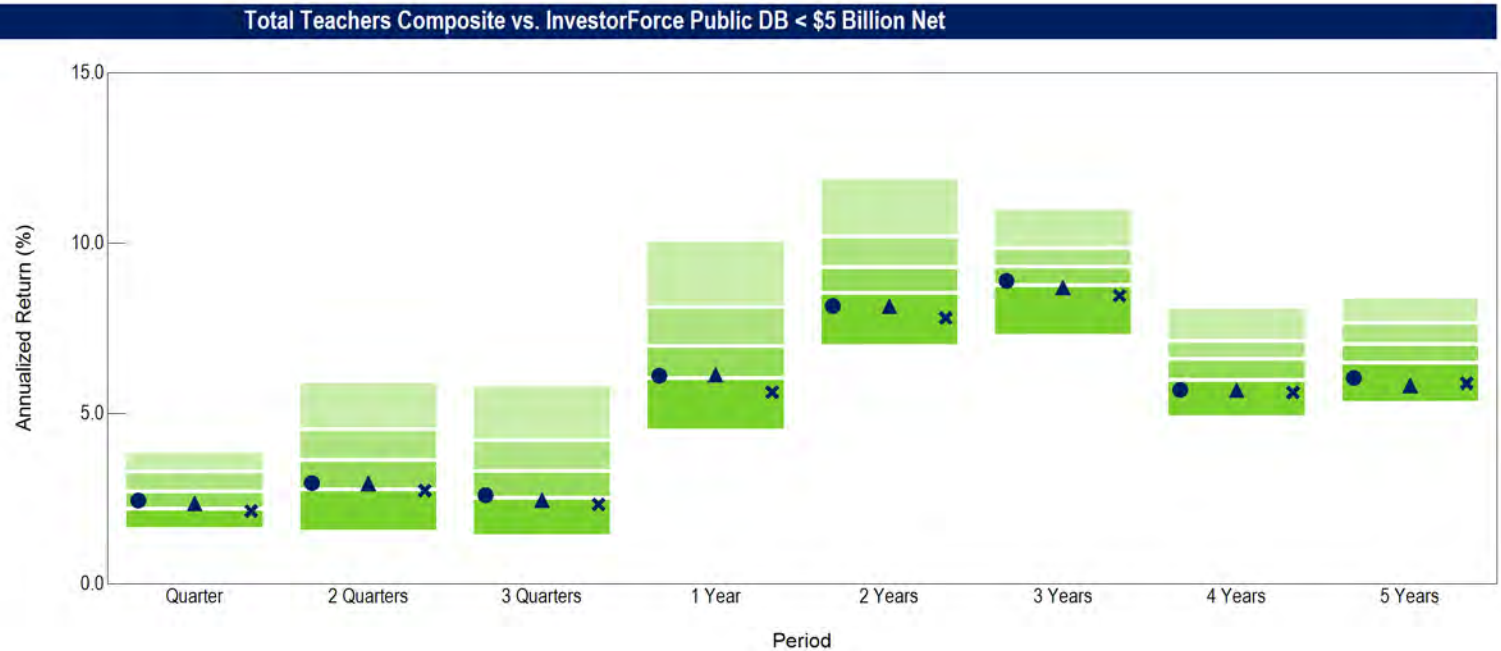

Asset Allocation Effect - Measures VPIC's ability to effectively allocate their portfolio's assets to various asset classes. The allocation effect determines whether the overweighting or underweighting of asset classes relative to a benchmark contributes positively or negatively to the overall portfolio return. Positive allocation occurs when the portfolio is overweighted in an asset class that outperforms the benchmark. Negative allocation occurs when the portfolio is overweighted in an asset class that underperforms the benchmark and underweighted in an asset class that outperforms the benchmark.

Selection Effect - Measures VPIC's ability to select managers within a given asset class relative to a benchmark. The over or underperformance of the portfolio is weighted by the benchmark weight, therefore, selection is not affected by VPIC's allocation to the asset class. The weight of the manager in the portfolio determines the size of the effect -- the larger the manager, the larger the effect is, positive or negative.

Interaction Effect - The interaction effect measures the combined impact of VPIC's manager selection and manager allocation decisions within an asset class. For example, if VPIC had superior manager selection and overweighted that particular asset class, the interaction effect is positive. If VPIC had superior manager selection, but underweighted that asset class, the interaction effect is negative. In this case, VPIC did not take advantage of the superior manager selection by allocating more assets to that asset class.

# DOMESTIC EQUITY COMPOSITE

# SSGA S&P 500 CAP-WGT

Using a replication process, we purchase each security for the Strategy in the same capitalization weight as it appears in the S&P 500 Index. Replication results in low turnover, accurate tracking, and low costs. SSgA's internal liquidity has allowed the firm to acquire many of the benchmark constituents for free. These free trading opportunities have allowed SSgA to gradually reduce security-level misweights while avoiding the open market. This process has resulted in portfolios that look and behave like the benchmark, and do so at a very low cost. SSgA's passive equity process objective is to remain fully invested in the equity market at all times. To accomplish this, it holds a small amount of unleveraged exchange-traded S&P 500® futures contracts to maintain full exposure. SSgA tends to hold approximately 1-3% of the strategy's value in suitable CFTC approved index futures contracts. This position in futures also allows the firm to accommodate cash flows into and out of the portfolio on a daily basis and to equitize dividend receivables to achieve closer tracking.

# SSGA S&P 500 CAP-WGT

# SSGA S&P 500 EQUAL-WGT

The Strategy is managed using a "passive" or "indexing" investment approach, by which SSgA attempts to match, before expenses, the performance of the Index. SSgA will typically attempt to invest in the securities comprising the Index, in the same proportions as they are represented in the Index. In some cases, it may not be possible or practicable to purchase all of the securities comprising the Index, or to hold them in the same weightings as they represent in the Index. In those circumstances, SSgA may employ a sampling or optimization technique to construct the portfolio in question. From time to time securities are added to or removed from the Index. SSgA may sell securities that are represented in the Index, or purchase securities that are not yet represented in the Index, in anticipation of their removal from or addition to the Index. The Strategy may at times purchase or sell futures contracts on the Index, or options on those futures, or engage in other transactions involving the use of derivatives, in lieu of investment directly in the securities making up the Index or to enhance the Strategy's replication of the Index return. The Strategy's return may not match the return of the Index.

# SSGA S&P 500 EQUAL-WGT

# CHAMPLAIN

Champlain employs a fundamental, bottom-up approach to investing in equity assets. They believe that superior companies purchased at attractive valuations have the highest probability to wealth creation. Champlain seeks strong businesses with credible and sincere management and aims to buy shares of their stock at discounts to fair or intrinsic value. Portfolio construction applies sector weight guidelines and position size rules to manage risk. The portfolio will have some exposure to at least seven out of the eight largest sectors of the S&P 400, with a maximum weighting on 25% in any one sector. Individual positions will not represent more than 2% of the respective companies' outstanding shares and are limited to no more than 5% of assets under management. The portfolio typically holds 50-75 securities with average position sizes of 2%. The strategy's minimum market cap is \$1.5 billion at purchase and a maximum market cap of \$15 billion. In general, no more than 10% of portfolio in stocks with a market cap below \$2B and no more than 5% of portfolio in companies with market cap above \$20B.

# ACADIAN

Acadian believes that the larger the pool of potential investments, the greater the potential opportunity an active manager has to add value. They believe that stocks and markets have many attributes that are related to potential outperformance, and that a successful investment approach must be multi-faceted and highly adaptable. They believe that objectivity is crucial to investment success. Acadian's quantitative process and extensive database allows them to apply their valuation techniques to over 40,000 stocks worldwide. They do not limit the universe other than to employ screens based on invest-ability and availability of data. For example, they only evaluate stocks that have sufficient daily trading volume to be appropriate for institutional investment. Other than these practical considerations, they consider our investment universe to encompass all institutionally investable stocks in the world.

# MONDRIAN

The firm is an active value-oriented defensive manager. The firm's value driven investment philosophy is based on the belief that investments need to be evaluated in terms of their fundamental long-term value. The firm believes that the value of a company lies in its future income stream as dividends represent the most direct form of cash flow to a shareholder. The firm uses an inflation adjusted dividend discount model to derive the underlying value of a company. This methodology is applied consistently to individual securities across all markets and industries. The universe spans markets covered in the MSCI Indices and those developing markets with adequate investor protection and good repatriation procedures. The firm will then narrow the universe to a list of more than 1000 securities on the basis of value criteria, and then further reduce this to a shorter list of approximately 250 securities annually, for detailed fundamental analysis. The screens include basic value characteristics such as price to book, price to cash flow ratio, price to earnings ratio, and yield, as well as liquidity considerations. A focus list of approximately 80 securities is then created from that list of approximately 250 through fundamental research and deliberations of the Equity Strategy Committee. It is this list of securities on which more detailed fundamental analysis and financial modeling is carried out utilizing the dividend discount model, which is based on an evaluation of a company's future income stream, which is then discounted in real terms.

# SSGA ACWI EX US

The MSCI ACWI ex US Index Strategy tends to hold each security that is held in the benchmark index, but the strategy will not be perfectly weighted in every index constituent on a daily basis. Holding securities in the perfect weights would require increased trading and therefore would incur costs. Thus, there will be securities in the fund that are either over- or under-weighted relative to the benchmark. The individual security mis-weights are very minimal, usually within 1 basis point. However, in aggregate, these small mis-weights can add up and result in tracking error if the mis-weighted securities' performance is volatile. SSgA seek to replicate the index by attempting to hold every security in the fund in its appropriate index weight. SSgA trade only when there is a change to the Index, when we have participant cash flows, or when we receive significant dividend income into the fund.

# HOSKING GLOBAL EQUITY

# ARTISAN GLOBAL OPPORTUNITIES

Artisans Global Opportunities strategy employs a fundamental investment process to construct a diversified global equity portfolio of companies across a broad capitalization range. The investment process focuses on two distinct areas security selection and capital allocation. Security Selection Artisans Growth investment team attempts to identify companies that possess franchise characteristics that are selling at attractive valuations, and benefiting from an accelerating profit cycle. Franchise Characteristics. These are characteristics that the team believes help to protect a companys stream of cash flow from the effects of competition. The team looks for companies with at least two of the following characteristics: low cost production capability, possession of a proprietary asset, dominant market share or a defensible brand name. Attractive Valuations. Through its own fundamental research, the team estimates the amount a private market buyer would pay to buy the entire company (the companys intrinsic value or private market value) and considers whether to purchase a stock if it sells at a discount to that estimate.

# ABERDEEN

Aberdeen believes, given the inefficiency of markets, that competitive long-term returns are achieved by identifying high quality stocks at attractive valuations and holding for the long term. It is their belief that sound fundamentals drive stock prices over time. They employ a fundamental bottom-up investment approach based upon a rigorous and disciplined proprietary research effort which originates with direct company due diligence visits. Portfolios are constructed to maximize their level of exposure to the most attractive companies filtered from the stock selection process. They run a representative or model' unconstrained portfolio that contains approximately 30 - 70 stocks at any given time. Once a stock has received unanimous approval by the team, the senior investment team members then decide which portfolio category it should enter (i.e. country, regional, Global Emerging Markets) and at what weighting. The Head of Global Emerging Markets then has responsibility to ensure that the decision is implemented.

# PIMCO CORE PLUS

PIMCO's investment process expects to generate above-benchmark returns by building diversified, risk-averse portfolios based upon their long-term secular outlook. This is achieved by analyzing fundamental global trends in such areas as political factors, inflation, volatility, growth, and currency, amongst others. The three to five-year secular outlook is the core element of their decision-making process, and serves as a framework for portfolio implementation. In applying the secular outlook to the portfolio, such tools as duration position, yield curve posture and sector allocation are expressed to best represent the firm's view on the macro-economic environment. Bottom-up analysis of specific securities is also an important part of the firm's philosophy. Bonds are evaluated on a rich/cheap basis and fundamental research determines strong portfolio candidates.

# PIMCO UNCONSTRAINED

The PIMCO Unconstrained Bond Strategy is an absolute return-oriented, investment grade quality fixed income strategy that embodies PIMCO's secular thinking, global themes, and integrated investment process without the constraints of a benchmark or significant sector/instrument limitations. The strategy is designed to offer the traditional benefits of a core bond portfolio - seeks maximum long-term return consistent with capital preservation and prudent management- but with higher potential alpha and the potential to mitigate downside risk to a greater degree than what is reasonably possible from traditional active fixed income management approaches as the strategy allows for more manager discretion to adjust duration exposure, allocate across sectors and otherwise express the firm's active views. The strategy is governed by PIMCO's investment philosophy and unique, disciplined secular investment process, which focuses on long-term economic, social and political trends that may have lasting impacts on investment returns.

# BLACKROCK TIPS

In the management of an inflation-linked bond portfolio, BlackRock will utilize multiple strategies to outperform the index. These include: duration and yield curve positioning, technical supply/demand anomalies related primarily to the ILB auction cycle, seasonal factors related to non-seasonally adjusted inflation-linked indices, break-even spread between ILBs and nominal securities, and, if applicable, sector and country allocation. The team compares nominal yields with real yields and factor in their views on inflation. If the yield spread is less than the inflation rate, then ILBs are considered to trade cheaply to nominal bonds and have greater relative value. The portfolio currently holds about 31 positions, out of 27-29 issues in the benchmark. Turnover is moderate, at around 100-150%.
