INTRODUCTION

The Board of Trustees of the Vermont State Employees' Retirement System has engaged Buck to prepare an actuarial valuation of their OPEB (Other Post-employment Benefits, or, postretirement benefits other than pension) program as of June 30, 2012. The State Treasurer's Office provided the employee data and premium information used in the completion of this valuation.

The purposes of the valuation are to measure the current liabilities of the System for its post-retirement benefits program and to provide reporting and disclosure information for financial statements, governmental agencies and other interested parties. In addition, the valuation provides information that may be used to determine the level of contributions recommended to assure sound funding of such benefits. This valuation report contains information that is required for compliance with the Governmental Accounting Standards Board's Statements 43 and 45, which relate to accounting and financial reporting for post-employment benefits other than pensions.

We performed the calculations assuming that the System would continue its current practice of paying for the benefits on a pay-as-you-go basis, and contributing Medicare Part D refunds into a dedicated and irrevocable trust fund. This approach qualifies as partial prefunding under Governmental Accounting Standards, and it was determined that a 4.25% discount rate is reasonable for this purpose. As requested, we have also provided results under alternative scenarios that assume that the System's post-retirement medical benefits other than pensions are funded in a manner similar to that used for pensions and on a pure pay-as-you-go basis. Section II provides a summary of the principal valuation results in the form of the information required under GASB 45.

There were no plan changes reflected in this valuation. Provisions of national health care reform legislation taking effect after June 30, 2010, were reflected in the valuation made as of that date.

Assumptions related to decrement rates were updated in the prior valuation to reflect the Experience Study of the Vermont State Employees' Retirement System, which was presented to and accepted by the Board on May 11, 2011. The evaluation of the suitability of these assumptions for this GASB 45 valuation is beyond the scope of this assignment. In addition, the fully-funded alternative scenario is being provided using a discount rate of 8.10% as is consistent with the single-rate equivalent recommended for the pension plan.

A change in the population of retirees included in the valuation was made in order to more accurately capture the actual retiree population for which the System is liable as of the valuation date. The System provided data on employees who retired July 1 following the valuation date and they were included as retired participants as of the valuation date.

223 members who terminated with five years of service within three years of the valuation date but have not cashed out their retirement benefits were assumed to cash out in the next year and not receive retiree medical benefits. These members were not included in the valuation.

Please see the table in Section I for summary of change to the Unfunded Actuarial Accrued Liability experienced over the year.

We are Fellows of the Society of Actuaries and Members of the American Academy of Actuaries. We meet the Qualification Standards of the Academy to render the actuarial opinions contained herein. David Driscoll meets the Qualification Standards in the pension areas of practice and has concentrated on the long term aspects of this analysis. Hope Manion meets the Qualification Standards in the health area of practice and has concentrated on the short term aspects of this analysis. Both undersigned actuaries have reviewed the overall reasonableness and consistency of these results. This report has been prepared in accordance with all applicable Actuarial Standards of Practice, and we are available to answer questions concerning it.

Respectfully Submitted,

BUCK CONSULTANTS, LLC

Hope C. Manion, FSA, MAAA
Director and Consulting Actuary

Date

SECTION I – OVERVIEW

The System experienced virtually no change in its Actuarial Accrued Liability for post-retirement benefits over the past year. The following factors caused changes in liability that generally offset each other, resulting in a lower liability than anticipated.

- Expected increases due to the passage of time;
- Demographic experience different than expected;
- Return on assets lower than expected;
- Increases in per capita healthcare costs that were smaller than anticipated;
- Other valuation refinements.

No demographic assumptions have been updated since the prior valuation. Per unit per capita healthcare costs were updated based on recent plan premium equivalents and enrollment. All other assumptions, including the healthcare cost trend and assumed discount rate, were the same as those used in 2011. A summary of valuation assumptions is shown in Section VI.

All plan provisions were the same as those reflected in the 2011 valuation.

The actual asset return over the year was approximately 3.10%, which was lower than the expected 8.10%.

GASB Staff Technical Bulletin No. 2006-1, Accounting and Financial Reporting by Employers for Payments from the Federal Government Pursuant to the Retiree Drug Subsidy Provisions of Medicare Part D, provides that GASB OPEB calculations cannot reflect offsets for future Medicare Part D subsidy payments. Instead, the payments are to be reflected when the drug subsidy is actually earned (i.e., when the drug benefit costs for which the subsidy is due have been incurred by the participants). Thus, our calculations do not directly reflect the value of future Retiree Drug Subsidy amounts. The commitment to contribute the future Retiree Drug Subsidy amounts represents a commitment to partial funding that has been reflected in the assumed discount rate.

We assume that the plan premiums developed by the insurance companies for 2012 reflect the required expansion of coverage to adult children under federal healthcare reform legislation. As the assumed per capita healthcare costs implicitly reflect the inclusion of children, we have not made an additional adjustment to the liabilities for this requirement this year.

We have updated our analysis surrounding the implementation of the High Cost Premium Excise Tax (“Cadillac Tax”). Based on our current understanding of how the tax will be assessed, we have refined our estimate of the impact of this premium tax on GASB 45 liabilities. We estimate the tax to increase total liabilities by 1.0%.

We have not made adjustments for other potential effects of any future health care reform legislation changes on VSERS liabilities. Please see Section VII for details.

Shown below is a reconciliation of the funded status from last year to this year under the 4.25% discount rate assumption (amounts in \$millions).

6/30/2011 Unfunded Accrued Liability		\$998.6
End of year service cost	41.6	
Interest cost	41.7	
Benefit Payments	(34.0)	
Expected increase in assets	<u>(3.1)</u>	
6/30/2012 Expected Unfunded Accrued Liability		\$1,044.8
Demographic experience different than expected	4.4	
New per capita costs	(12.7)	
Other Refinements	(39.0)	
Asset loss	<u>0.9</u>	
6/30/2012 Unfunded Accrued Liability		\$998.4

The expected increase in assets reflects expected RDS payments of \$2.1 million and expected return on assets of \$1.0 million. The asset experience loss is comprised of \$0.3 million in RDS payments lower than expected and investment income of \$0.6 million lower than expected.

The fiscal 2013 Annual Required Contribution calculated on the partial funding basis at a discount rate of 4.25% is \$67,977,179; we estimate the Annual Required Contribution calculated at 4.25% for the subsequent year (fiscal year ending June 30, 2014) to be \$71,247,660.

SECTION II – REQUIRED INFORMATION

	<u>Pre-Funding</u> <u>Basis</u>	<u>Partial-Funding</u> <u>Basis</u>	<u>Pay-as-you-go</u> <u>Basis</u>
a) Assumed discount rate	8.10%	4.25%	4.00%

SECTION IV – REQUIRED SUPPLEMENTARY INFORMATION

The Schedule of Funding Progress is required to be included in the State’s Financial Statements

**SCHEDULE OF FUNDING PROGRESS WITH ASSUMPTIONS
BASED ON CURRENT POLICY ON FUNDING**

(dollar amounts in thousands)

Actuarial Valuation Date	Actuarial Value of Assets (a)	Actuarial Accrued Liability (AAL) (b)	Unfunded AAL (UAAL) (b)-(a)	Funded Ratio (a)/(b)	Covered Payroll (c)	UAAL as a Percentage of Covered Payroll [(b)-(a)]/(c)
June 30, 2012	\$13,379	\$1,011,783	\$998,404	1.3%	\$406,929	245.4%
June 30, 2011	\$11,216	\$1,009,792	\$998,576	1.1%	\$420,321	237.6%
June 30, 2010	\$7,897	\$925,183	\$917,286	0.9%	\$414,936	221.1%
June 30, 2009	\$5,749	\$780,748	\$774,999	0.7%	\$426,827	181.6%
June 30, 2008	\$3,664	\$754,690	\$751,027	0.5%	\$404,937	185.5%
June 30, 2007	\$2,211	\$606,499	\$604,288	0.4%	\$386,917	156.2%
June 30, 2006	\$0	\$552,152	\$552,152	0.0%	\$369,310	149.5%

These results are based on a discount rate of 3.75% for 2006 – 2007, 4.00% for 2007 – 2008 and 4.25% for 2009 – 2012.

If the State were to change its funding policy to pre-fund the entire calculated Annual Required Contribution, prospectively, the Schedule of Funding Progress would look as follows:

**SCHEDULE OF FUNDING PROGRESS WITH ASSUMPTIONS
BASED ON POLICY OF PRE-FUNDING**
(dollar amounts in thousands)

Actuarial Valuation Date	Actuarial Value of Assets (a)	Actuarial Accrued Liability (AAL) (b)	Unfunded AAL (UAAL) (b)-(a)	Funded Ratio (a)/(b)	Covered Payroll (c)	UAAL as a Percentage of Covered Payroll [(b)-(a)]/(c)
June 30, 2012	\$13,379	\$605,750	\$592,371	2.2%	\$406,929	145.6%
June 30, 2011	\$11,216	\$1,009,792	\$998,576	1.1%	\$420,321	237.6%
June 30, 2010	\$7,897	\$925,183	\$917,286	0.9%	\$414,936	221.1%
June 30, 2009	\$5,749	\$780,748	\$774,999	0.7%	\$426,827	181.6%
June 30, 2008	\$3,664	\$754,690	\$751,027	0.5%	\$404,937	185.5%
June 30, 2007	\$2,211	\$606,499	\$604,288	0.4%	\$386,917	156.2%
June 30, 2006	\$0	\$552,152	\$552,152	0.0%	\$369,310	149.5%

These results are based on a discount rate of 3.75% for 2006 – 2007, 4.00% for 2007 – 2008, 4.25% for 2009 – 2011, and 8.10% for 2012.

SECTION V – NET OPEB OBLIGATION

GASB Statement No. 45 requires the development of Annual OPEB Cost and Net OPEB Obligation (NOO). This development is shown in the following table.

DEVELOPMENT OF OPEB COST AND NET OPEB OBLIGATION (NOO)

Year Ending June 30	Annual Required Contribution	Interest on NOO	Amortization of NOO	Annual OPEB Cost (1)+(2)-(3)	Actual Contribution	Change in NOO (4)-(5)	NOO Balance
(1)	(2)	(3)	(4)	(5)	(6)	(7)	
2008	47,284,903	0	0	47,284,903	17,776,355	29,508,548	29,508,548
2009	58,666,959	1,180,342	853,250	58,994,051	19,893,129	39,100,922	68,609,470
2010	57,998,078	2,915,902	2,057,241	58,856,739	22,528,768	36,327,971	104,937,441
2011	67,030,307	4,459,841	3,146,528	68,343,620	27,394,474	40,949,146	145,886,587
2012	69,880,277	6,200,180	4,374,380	71,706,077	27,652,189	44,053,888	189,940,474
2013	67,977,179	8,072,470	5,695,328	70,354,321			

The FYE June 30, 2012 actual contribution amount includes the Medicare Part D Retiree Drug Subsidy received by the State. This amount was treated as a contribution amount. However, we note that the Medicare Modernization Act which authorized the Retiree Drug Subsidy provided that the subsidy would be provided to the employer.

SECTION VI – ACTUARIAL ASSUMPTIONS AND METHODS

VERMONT STATE EMPLOYEES – ALL GROUPS

Assumed investment return

4.25% per year for a partially-funded plan based on a blend of 8.10% per year, net of investment expenses, the assumed rate of return on assets accumulated in the System’s trust for benefit payments, and 4.00% per year, the assumed rate of return on general assets of the employer. In addition, two alternative scenarios are presented, using 8.10% for a pre-funded plan, and 4.00% for a non-funded plan. Note that the fully funded discount rate is consistent with the single-equivalent rate used for the pension valuations; last year, fully funded results were provided using a discount rate of 8.10%. Currently the assets of the Postemployment Benefit Trust are not invested in the same manner as the System, but it is assumed that the long term asset allocation will be the same as the System’s overall asset allocation strategy.

Actuarial cost method:

Projected Unit Credit with benefits attributed from date of hire until reaching age 55 with at least 10 years of service.

Medical care and state share inflation:

Fiscal Year Ending	Medical Inflation Rate
2013	6.50
2014	6.25
2015	6.00
2016	5.75
2018	5.50
2019	5.25
2020 +	5.00

The assumption reflects a blend of the medical benefit cost inflation for pre-Medicare and post-Medicare coverage.

Amortization period:

Open basis, thirty-year amortization starting in the fiscal year starting in fiscal 2013 with payments increasing by 5% annually, as is consistent with statutory guidelines regarding amortization of pension liabilities. For the hypothetical unfunded scenario, the same method is used. For the hypothetical fully funded scenario, a similar method is used, but on a closed basis.

Coverage:

It is assumed that 80% of current active employees will elect retiree medical coverage. It is assumed that 70% of terminated vested participants will elect medical coverage when they start receiving pension benefits. It is assumed that deferred pension benefits will commence at age 50.

Administrative expenses:

No provision made beyond healthcare administration; expenses of the System are paid by the State.

Medical plan costs:

Estimated gross per capita incurred claim costs for 2012-13 at age 64 and 65 were \$13,669 and \$3,748, respectively. Per capita claims costs at other ages reflect estimated underlying costs based on Morbidity. It is assumed that future retirees are Medicare eligible at age 65. Per capita costs were developed from the monthly premium equivalents calculated by the State and are assumed to include administrative costs. The plans are self-insured. Per capita costs for pre-65 coverage include an implicit subsidy for covered children.

Retiree Contribution Basis

Retiree contributions are valued with a weighted-average premium. This weighted-average premium is based on the medical plan coverage of current retirees, and varies for pre-65 and Medicare-eligible coverage. Contributions for children are included in the weighted average pre-65 rates.

Premium Reduction Option

It is assumed that 50% of retirees covering spouses will elect the Premium Reduction Option at retirement. The Option is currently valued using a reduction factor of 92.5% of the single-life subsidy for which the retiree and spouse are eligible.

Age-based morbidity:

Per capita costs are adjusted to reflect expected cost increases related to age. Age-based morbidity factors were applied to pre-65 medical and prescription drug costs, and Medicare-eligible medical costs. Prescription drug costs are not assumed to increase with age above age 65. The increase in the net incurred claims was assumed to be:

<u>Age</u>	<u>Annual Increase Medical Costs</u>	<u>Annual Increase Prescription Costs</u>
40 and below	0.0%	0.0%
41-49	2.6%	2.6%
50-54	3.2%	3.2%
55-59	3.4%	3.4%
60-64	3.7%	3.7%
65-69	3.2%	0.0%
70-74	2.4%	0.0%
75-79	1.8%	0.0%
80-84	1.3%	0.0%
85 and over	0.0%	0.0%

Groups A, D, F, and Defined Contribution

Separations from service:

Representative values of the assumed annual rates of withdrawal, vested retirement, disability and death are as follows. The active mortality is based on the RP-2000 Tables with mortality improvements projected to 2016 with Scale AA.

Age	Withdrawal and Vested Retirement ¹	Disability	Death	
			Men	Women
25	4.09%	.03%	.03%	.02%
30	3.27	.04	.04	.02
35	2.74	.05	.07	.04
40	2.53	.08	.10	.06
45	2.24	.13	.12	.09
50	1.87	.21	.16	.13
55	1.53	.35	.22	.22
59	3.26	.52	.34	.33
60	3.25	.57	.38	.36
61	3.24	.62	.42	.40

¹ Increased during first 10 years of service.

Retirement – Group F ²					
Age	Rate (M/F, 30 Years)	Age	Rate (All)	Age	Rate (All)
49	0%/6%	55	5.0%	63	17.5%
50	20%/6%	56	4.2	64	17.5
51	20%/8%	57	5.6	65	25.0
52	10%/9%	58	6.3	66	15.0
53	10%/9%	59	7.0	67	17.5
54	10%/10%	60	7.0	68	17.5
		61	14.0	69	20.0
		62	28.0	70	100.0

² All Group A and D members are assumed to retire when first eligible.

Deaths after retirement:

Service Retirees and Beneficiaries: The RP-2000 Mortality Tables for Healthy Annuitants for retirees and beneficiaries with mortality improvements projected to 2010 with Scale AA.

Disabled retirees: The RP-2000 Mortality Tables for Healthy Annuitants for retirees and beneficiaries with a three-year set-forward.

The tables used were selected to allow for a margin to reflect mortality improvement through 2016. No further mortality improvement was assumed.

Spouse's age:

Husbands are assumed to be 3 years older than their wives.

Covered spouses:

75.4% (71.4% for Group F and Defined Contribution) of male members and 64.0% (63.1% for Group F and Defined Contribution) of female members are assumed to be covering spouses.

Group C

Separations before retirement:

Representative values of the assumed annual rates of withdrawal, vested retirement, disability and death are as follows. The active mortality is based on the RP-2000 Tables with mortality improvements projected to 2016 with Scale AA.

Age	Withdrawal and Vested Retirement ¹		Disability	Death	
	Men	Women		Men	Women
25	3.60%	7.20%	.15%	.03%	.02%
30	3.60	7.20	.20	.04	.02
35	3.60	7.20	.27	.07	.04
40			.40	.10	.06
45			.65	.12	.09
50			1.09	.16	.13
55			1.82	.22	.22
60			2.93	.38	.36

¹ Increased during first 5 years of service.

Early and normal retirement rates:

All members are assumed to retire when first eligible.

Deaths after retirement:

Service Retirees and Beneficiaries: The RP-2000 Mortality Tables for Healthy Annuitants for retirees and beneficiaries with mortality improvements projected to 2010 with Scale AA.

Disabled retirees: The RP-2000 Mortality Tables for Healthy Annuitants for retirees and beneficiaries with a three-year set-forward.

The tables used were selected to allow for a margin to reflect mortality improvement through 2016. No further mortality improvement was assumed.

Group C

Spouse's age:

Husbands are assumed to be 3 years older than their wives.

Covered spouses:

75.4% of male members and 64.0% of female members are assumed to be covering spouses.

SECTION VII – CONSIDERATION OF HEALTH CARE REFORM

Summary of Effects of Selected Provisions

Early Retiree Reinsurance Program – Effective 6/1/2010: It is our understanding that this program ceased once all allocated funding was distributed, and so there is no impact on GASB 45 liabilities.

Removal of Lifetime Maximum – We expected that the elimination of the lifetime maximums as of January 1, 2011 would have a negligible impact on the retiree health plan obligations since the plans had relatively high lifetime maximums of \$2 million. We assume that any impact is now reflected in the 2012 plan premium equivalents developed by the State.

Medicare Advantage Plans - Effective 1/1/2011: The law provides for reductions to the amounts that would be provided to Medicare Advantage plans starting in 2011. As the State does not provide these plans to retirees, there is no impact.

Expansion of Child Coverage to Age 26: We assume that the effect of this provision is reflected in the 2012 plan premium equivalents developed by the State and are therefore, any impact is already being recognized in the assumed per capita costs. In our previous valuation, we explicitly reflected an estimate of the increase in developing the per capita costs used in our calculations. However, no such adjustment was necessary this year.

Medicare Part D Subsidy - Shrinking Medicare Prescription Drug “Donut Hole”- Starting 1/1/2011– Medicare Part D Retiree Drug Subsidy (“RDS”) payments are not reflected as an ongoing offsetting item in GASB 45 valuations, and so no direct impact is reflected. The partial funding 4.25% discount rate is predicated on the commitment to continue to contribute the RDS amount into the plan. RDS actuarial equivalence testing does not reflect the new donut hole shrinking Part D benefits, and thus would not impact the available future RDS for partial funding. Further, the benefits provided to Medicare eligible Vermont retirees under this plan have enough subsidy provided by the plan that we do not anticipate that plan participation will be affected as the competing Part D benefits are improved. Thus, the changes to Medicare Part D have no impact on the calculations.

Excise Tax on High-Cost Employer Health Plans (aka Cadillac Tax) - Effective 1/1/2018 - We have estimated additional costs for the high cost plan excise tax (High cost excise tax), and have loaded liabilities 1.0% to reflect the assessment of this tax on plan premiums beginning in 2018. The 1.0% load was estimated reflecting a 3.0% CPI assumption, consistent with the assumption reflected for cost of living in the Vermont State Employees’ Retirement System valuation.

Other: We have not identified any other specific provision of national health care reform that would be expected to have a significant impact on the measured obligation. The single payer system called Green Mountain Care to be established in Vermont has the potential of significant impact on the valuation. At this point, plans for implementation are just beginning, and it is not possible to predict what that impact will be. As additional guidance on both the federal and Vermont legislation is issued, we will continue to monitor any potential impacts

SECTION VIII – POSTRETIREMENT BENEFIT PLAN PROVISIONS

RETIREE MEDICAL BENEFITS

ELIGIBILITY AND PREMIUM SUBSIDY

Retiree Coverage and Subsidy Level

Group A:

Retirement Earlier of (a) age 55 with 5 years of service or
(b) 30 years of service: 80% Subsidy

Group C:

Retirement Earlier of (a) age 55, (b) age 50 with 20 years
of service, or (c) 30 years of service: 80%
Subsidy

Termination Participants who terminate with 20 or more
years of service may begin medical benefits
upon commencement of retirement benefits:
80% Subsidy.

Group D:

Retirement Age 55 with 5 years of service: 80% Subsidy

Group F and Defined Contribution:

Retirement Earlier of (a) age 55 with 5 years of service or
(b) 30 years of service

Hired prior to July 1, 2008 - 80% Subsidy

Hired on or after July 1, 2008

Less than 10 years:	0% Subsidy
10-14 years:	40% Subsidy
15-19 years:	60% Subsidy
20 years or more:	80% Subsidy

Termination Participants who are first included in the
membership on or after July 1, 2008 who
terminate with 20 or more years of service may
begin medical benefits upon commencement of
retirement benefits: 80% Subsidy.

RETIREE CONTRIBUTIONS

Retirees must pay all premium costs in excess of the VSERS subsidy. The VSERS subsidy is equal to the retiree's subsidy percentage applied to the plan premium according to the plan and tier elected.

Premium Reduction Option: For retirements on or after January 1, 2007, members entitled to a VSERS premium subsidy have a one-time option to reduce the percentage of VSERS subsidy during the retiree's life, with the provision that a surviving spouse will continue to receive the same VSERS subsidy for his or her lifetime. The reduction in VSERS subsidy is intended to result in an actuarially equivalent benefit.

BENEFIT DURATION

Lifetime for retirees. Spouses of retirees who elect the joint and survivor pension option may continue coverage for their lifetimes but must pay 100% of the plan premium (unless PRO option is elected).

STATE OF VERMONT EMPLOYEE MEDICAL PLAN OPTIONS FOR RETIREES
Effective January 1, 2012

Benefit/Feature	TotalChoice Plan	SelectCare POS Plan		HealthGuard PPO Plan		SafetyNet Plan
		In-Network	Out-of-Network	In-Network	Out-of-Network	
Annual DEDUCTIBLE	\$300 per person; \$600 per family	none	\$500 per person; \$1,000 per family	\$300 per person; \$600 per family	\$500 per person; \$1,000 per family	\$2,000 per person, no family maximum

Home Healthcare	80%	100%	70%	80%	60%	70%
COMMON BENEFITS IN ALL PLAN OPTIONS						
Preventive Exams & Tests-Program Benefits	1. Physicals (includes well child care). 2. Immunizations 3. Prostate & GYN exams. 4. Mammograms. Included as regular benefits subject to the plan coinsurance, or copay, if applicable. However, maximum out-of-pocket expense of \$25 applies. 5. Colonoscopies. Included as regular benefits subject to the plan coinsurance, or copay, if applicable. However, maximum out-of-pocket expense of \$100 applies. Benefits provided to all members, including dependents.					
Wellness Program Benefits	Available to all active employees and retirees in any of the four health plan options, at no charge to the employee or retiree.					
COMMON BENEFITS IN ALL PLAN OPTIONS EXCEPT THE SAFETYNET PLAN						
Mental Health & Substance Abuse Program Benefits	In-Network: Paid at 100%. No predetermined visit or day limits. Out-of-Network: Visit & day limits apply. Deductibles & copay required.					Plan pays 70%

STATE OF VERMONT EMPLOYEE MEDICAL PLAN OPTIONS FOR RETIREES (Continued)

<p>Prescription Drugs</p> <ul style="list-style-type: none"> •Retail •Mail 	<p>This is a prescription drug card plan, which combines both local retail and mail order drugs. There is an annual \$25 per person/\$75 family deductible. Individual pays 10% copay for generic drugs, 20% copay for preferred brand drugs, and 40% copay for non-preferred brand drugs. 40% copay drugs will not be counted toward the maximum out-of-pocket limit, except for Specialty drugs. Maximum out-of-pocket is \$775 per covered member per year for both retail and mail order including the deductible.</p>	<p align="center">Plan pays 70%</p>
<p>Routine Vision Care</p>	<p>The plan pays \$100 every two years, with no deductible and coinsurance, or copay. Benefits available for every plan member, including dependents. Covers routine exams and/or lens changes.</p>	<p align="center">Plan pays 70% of charge, after deductible, up to \$100, every 2 years</p>

SECTION IX - GLOSSARY OF TERMS

Actuarial accrued liability

That portion, as determined by a particular Actuarial Cost Method, of the Actuarial Present Value of OPEB benefits and expenses which is not provided for by future Normal Costs and therefore is the value of benefits already earned.

Actuarial assumptions

Assumptions as to the occurrence of future events affecting OPEB costs, such as: mortality, withdrawal, disablement and retirement; changes in compensation and Government provided OPEB benefits; rates of investment earnings and asset appreciation or depreciation; procedures used to determine the Actuarial Value of Assets; characteristics of future entrants for Open Group Actuarial Cost Methods; and other relevant items.

Actuarial cost method

A procedure for determining the Actuarial Present Value of OPEB benefits and expenses and for developing an actuarially equivalent allocation of such value to time periods, usually in the form of a Normal Cost and an Actuarial Accrued Liability.

Actuarial experience gain or loss

A measure of the difference between actual experience and that expected based upon a set of Actuarial Assumptions, during the period between two Actuarial Valuation dates, as determined in accordance with a particular Actuarial Cost Method.

Amortization (of unfunded actuarial accrued liability)

That portion of the OPEB plan contribution which is designed to pay interest on and to amortize the Unfunded Actuarial Accrued Liability or the Unfunded Frozen Actuarial Accrued Liability.

Annual OPEB cost

An accrual-basis measure of the periodic cost of an employer's participation in a defined benefit OPEB plan.

Annual required contributions of the employer (ARC)

The employer's periodic expense to a defined benefit OPEB plan, calculated in accordance with the parameters. It is the value of the cash contributions for a funded plan and the starting point in the calculations of the expense entry in the profit and loss section of the financial statements.

Closed amortization period (closed basis)

A specific number of years that is counted from one date and, therefore, declines to zero with the passage of time. For example, if the amortization period initially is thirty years on a closed basis, twenty-nine years remain after the first year, twenty-eight years after the second year, and so forth. In contrast, an open amortization period (open basis) is one that begins again or is recalculated at each actuarial valuation date. Within a maximum number of years specified by law or policy (for example, thirty years), the period may increase, decrease, or remain stable.

Covered payroll

Annual compensation paid to active employees covered by an OPEB plan. If employees also are covered by a pension plan, the covered payroll should include all elements included in compensation on which contributions to the pension plan are based. For example, if pension contributions are calculated on base pay including overtime, covered payroll includes overtime compensation.

Defined benefit OPEB plan

An OPEB plan having terms that specify the benefits to be provided at or after separation from employment. The benefits may be specified in dollars (for example, a flat dollar payment or an amount based on one or more factors such as age, years of service, and compensation), or as a type or level of coverage (for example, prescription drugs or a percentage of healthcare insurance premiums).

Funded ratio

The actuarial value of assets expressed as a percentage of the actuarial accrued liability.

Funding policy

The program for the amounts and timing of contributions to be made by plan members, employer(s), and other contributing entities (for example, state government contributions to a local government plan) to provide the benefits specified by an OPEB plan.

Healthcare cost trend rate

The rate of change in per capita health claims costs over time as a result of factors such as medical inflation, utilization of healthcare services, plan design, and technological developments.

Investment return assumption (discount rate)

The rate used to adjust a series of future payments to reflect the time value of money.

Level dollar amortization method

The amount to be amortized is divided into equal dollar amounts to be paid over a given number of years; part of each payment is interest and part is principal (similar to a mortgage payment on a building). Because payroll can be expected to increase as a result of inflation, level dollar payments generally represent a decreasing percentage of payroll; in dollars adjusted for inflation, the payments can be expected to decrease over time.

Level percentage of projected payroll amortization method

Amortization payments are calculated so that they are a constant percentage of the projected payroll of active plan members over a given number of years. The dollar amount of the payments generally will increase over time as payroll increases due to inflation; in dollars adjusted for inflation, the payments can be expected to remain level.

Net OPEB obligation (NOO)

The cumulative difference since the effective date of this Statement between annual OPEB cost and the employer's contributions to the plan, including the OPEB liability (asset) at transition, if any, and excluding (a) short-term differences and (b) unpaid contributions that have been converted to OPEB-related debt. It will be included as a balance sheet entry on the financial statements.

Normal cost

That portion of the Actuarial Present Value of OPEB benefits and expenses which is allocated to a valuation year by the Actuarial Cost Method. It is the value of benefits to be accrued in the valuation year by active employees.

OPEB-related debt

All long-term liabilities of an employer to an OPEB plan, the payment of which is not included in the annual required contributions of a sole or agent employer (ARC) or the actuarially determined required contributions of a cost-sharing employer. Payments generally are made in accordance with installment contracts that usually include interest. Examples include contractually deferred contributions and amounts assessed to an employer upon joining a multiple-employer plan.

Other postemployment benefits

Postemployment benefits other than pension benefits. Other postemployment benefits (OPEB) include postemployment healthcare benefits, regardless of the type of plan that provides them, and all postemployment benefits provided separately from a pension plan, excluding benefits defined as termination offers and benefits.

Pay-as-you-go

A method of financing a OPEB plan under which the contributions to the plan are generally made at about the same time and in about the same amount as benefit payments and expenses becoming due.

Required supplementary information (RSI)

Schedules, statistical data, and other information that are an essential part of financial reporting and should be presented with, but are not part of, the basic financial statements of a governmental entity.
